Professional Summary

Highly skilled and talented Biomedical Engineer with five years' experience designing and improving medical equipment for disease diagnosis, treatment and prevention. Proven expertise in the set-up, testing and interfacing of medical data acquisition equipment, computer data processing and medical data analysis.

Work Experience

Biomedical Engineer, AAA Medical Center, Any Country

2014-2017

Duties:

- Complete understanding of biomedical engineering concepts.
- Performing analysis support and data collection for product development including neuro-critical care applications and brain monitoring.
- Interacting with medical research experts from different universities and hospitals.
- Installed, repaired, and maintained biomedical equipment.
- Assisted in designing and delivering technology to help mobility in patients.
- Implementing and developing new algorithms with the help of IBT scientists.

Biomedical Engineer, ZZZ Medical, Any Country

2012-2014

Duties:

- Design develop test and modify products equipment and devices.
- Plan all financial aspects and engineering responsibilities related to medical equipment.
- Maintained logs compiled statistics and conducted research.
- Created and implemented designs.
- Applied engineering and biomedical science in designing and developing medical diagnostic and clinical instrumentation

Education

Bachelor's Degree in Biomedical Engineering, ABC University, Any Country

2008-2012

Skills

- Skilled in creating artificial organs for different parts of the body
- Profound knowledge of conducting clinical research and analyzing data
- English and Spanish: writing, reading, listening & conversation.
