Abstract

Abstract: Citation tracking is used to discover how many times a particular article has been cited by other articles. Citation tracking involves using citation data to measure the impact of an article and monitor the impact of research publications. Citation tracking lets you follow a particular author or paper and how it's being cited at present. Citation tracking allow you to find out which bits of your work are appreciated and used by other academics. There are a number of indexing services which keep track of citations. Example: Scopus, Web of Science (WOS), Google Scholar, ResearchGate, etc. In this workshop, I will introduce some important tools for tracking your scholarly output citations and know how often (and by whom) your paper has been cited already?.

Keywords: H-index, Improve citations, Research tools, Bibliometrics, Research Visibility, Documents publishing

Workshop Series :

Strategies to Enhance Research Visibility, Impact & Citations

Boosting your Research Visibility

Do you know "Over 43% of ISI papers have never ever received any citations?" (nature.com/top100_2014). Publishing a high quality paper in scientific journals is only halfway towards receiving citation in the future. The rest of the journey is dependent on disseminating the publications via proper utilization of the "[Research Tools](#)". Proper tools allow the researchers to increase the research impact and citations for their publications. This workshop series will provide you various techniques on how you can increase the visibility and hence the impact of your research work.

Who should attend?

The workshop is for professors, lecturers, and researchers who have published papers and would like to increase their papers' visibility and citation index. The workshop is applicable for various research disciplines. This workshop series is for UM Staff and UM students only.

Workshop Details & Registration

Speaker: Dr. [Nader Ale Ebrahim](#), PhD (Research Fellow)
Dr. Bong Yii Bonn, PhD (Research Manager)

Venue: Computer Lab, Level 2, Institute of Research Management & Services (IPPP)
Research Management & Innovation Complex, University of Malaya

Organizer: Centre for research Services (PPP), IPPP, University of Malaya

Time & Date: Kindly refer page 2 of the brochure

Fees: RM 10.00 per Session / Topic
* **Direct Bank-In ONLY**
Please bank-in to the account :
BENDAHARI UNIVERSITI MALAYA (CIMB Account No: 80-0127999-B)

Research Tools Mind Map

How can I attract attention to my work?

Write a lay summary of your research and introduce it via relevant discussion lists and online forums.

Upload and make available data, images, posters and other files via a platform such as figshare.

Start your own blog (or contribute to an existing one) - it's a great way to build your online profile and position your research.

Reach out to key bloggers to make them aware of your work - look at the Altmetric details pages for other articles in your discipline to see who might be interested.

Include a link to your work in your email signature, online profiles or CV.

Work with the press office at your publisher or institution to announce the publication of your research.

Share links to your work via twitter and other social media after presenting at conferences.

Register for an ORCID iD and populate your profile so that others can easily discover your work.

Make your work available via Open Access wherever possible, and share links to your full text outputs on social media.

Track Citations (Steps 3-6) [Print Page](#)

Search:

This Guide

Step 3: Create Citation Subfolders

For **each publication** added to RefWorks, create a Citation Subfolder having the same name as the publication

Citation Subfolders will include citing works for your publications, and will be located under the Master List folders.

1. Create one subfolder for every article, book, book chapter, conference proceeding, etc, in your Master Lists folders.

Each subfolder needs to sit under the Master List folder in order to help you tally your citation counts at the end ([step 9](#)).

2. An easy way to create individual subfolders for each publication is to copy/paste the title from

Step 4: Add Citing Works to RefWorks

Identify the number of times **each publication** has been cited in a particular database

1. Return to the database you used and locate the first of your publications. Look for a citation link (*Times Cited/Cited By/Citations*). For example:

Times Cited: 15
(from *Web of Science Core Collection*)

- a. Note the title of your article, book, book chapter etc.
- b. Click on the citation link associated with that article book etc., to bring up works citing your work.

Step 5: Create Citation Alerts

For **each publication**, set up a Citation Alert within **each database**

1. Click on the title of the first article in your search results. This will bring you to the page that contains the abstract. Look for the **Set Alert, e-Alert or Feed (RSS)** button and create a citation alert. This will set up an email or RSS feed alert in that database that will notify you each time your article is cited by someone else. For example:

The importance of citation tracking

The standard tool used in citation tracking is a citation index. Citation indexes allow you to search the academic literature in ways that show the progress of academic debate in your field. With a citation index, you can easily identify **the most influential articles**, and the leading academics in your field. You can track backwards (using lists of cited articles) and forwards (using lists of articles which cite a particular article). This means that you can determine the position of academic debate at any time in the past.

Abstract
This study provides an overview of the knowledge management literature from 1980 through 2014. We employ bibliometric and text mining analyses on a sample of 500 most cited articles to examine the impact of factors such as number of authors, references, pages, and keywords on the number of citations that they received. We also investigate major trends in knowledge management literature including the contribution of different countries, variations across publication years, and identifying active research areas and major journal outlets. Our study serves as a resource for future studies by shedding light on how trends in knowledge management research have evolved over time and demonstrating the characteristics of the most cited articles in this literature. Specifically, our results reveal that the most cited articles are from United States and United Kingdom. The most prolific year in terms of the number of published articles is 2009 and in terms of the number of citations is 2012. We also found a positive relationship between the number of publications' keywords, references, and pages and the number of citations that they have received. Finally, the Journal of Knowledge

The number of citations to one of my articles is too low.

The number of citations to one of my articles is too low. I know of several articles citing it that are not included in the list of citations. What I can do to help fix this?

Your "Cited by" counts come from the Google Scholar index. You can change the articles in your profile, but citations to them are computed and updated automatically as we update Google Scholar.

To change the "Cited by" counts in your profile, you would need to have them updated in Google Scholar. Google Scholar generally reflects the state of the web as it is currently visible to our search robots and to the majority of users. If some of the citations to your article are not included, chances are that the **citing articles are not accessible** to our search robots or **are formatted in ways that make it difficult** for our indexing algorithms to identify their bibliographic data or references.

To fix this, you'll need to identify the specific citing articles with indexing problems and work with the publisher of these articles to make the necessary changes (see our [inclusion guidelines](#) for details). For most publishers, it usually takes 6-9 months for the changes to be reflected in Google Scholar; for very large publishers, it can take much longer.

The Rise of "Trade Liberalization": Bibliometric Analysis of Trade Liberalization Study

Murtala Muhammad, Abubakar Ahmed, Gold Kafilah Lola, Usman Mikail Usman, Nader Ale Ebrahim

Abstract

The purpose of this research is to assess the universal scientific trends and examine the patterns in the intellectual research published on trade liberalization over a period of 35 years (1980-2015). The data were collected from a leading indexing and abstracting database Thomson Reuters Web of Science. The Kruskal-Wallis test, ANOVA and Pearson's correlation were employed in analyzing the retrieved data. Based on the citation trend of first 100 highly cited published articles with the least number of authors are found to have received the highest number of citations. Our result shows that there is actual statistical significance ($p < 0.001$) between the total citations attracted by articles published by 1 author and those published by 3 and 4 authors. The word trade liberalization has become dominant and consistent in the field of the study. These research trend and interest could provide focus to researchers for future research.

by irregular cell of cells, leading to are increasingly study
