Abstract

Abstract: “[Research Tools](#)” can be defined as vehicles that broadly facilitate research and related activities. Scientific tools enable researchers to collect, organize, analyze, visualize and publicized research outputs. Dr. Nader has collected over 700 tools that enable students to follow the correct path in research and to ultimately produce high-quality research outputs with more accuracy and efficiency. It is assembled as an interactive Web-based mind map, titled “[Research Tools](#)”, which is updated periodically.

“[Research Tools](#)” consists of a hierarchical set of nodes. It has four main nodes: (1) [Searching the literature](#), (2) [Writing a paper](#), (3) [Targeting suitable journals](#), and (4) [Enhancing visibility and impact of the research](#). Several free tools can be found in the child nodes. In this workshop some tools as examples from the part 4 ([Enhancing visibility and impact of the research](#)) will be described. The e-skills learned from the workshop are useful across various research disciplines and research institutions.

Keywords: H-index, Improve citations, Research tools, Bibliometrics, Research Visibility, Research Impact

Effective Strategies for Increasing Citation Frequency

Journal Reputation and Impact: publishing a paper in a journal based on disciplinary reputation or with a high impact factor is the most well known way of getting your paper cited. But there are many other things a scholar can do to promote his or her work and make it easy for others to find.

Utilize Open Access Tools: Open Access journals tend to be cited more than non open access. Deposit your paper in a repository such as Scholars Archive here on campus or a disciplinary repository. Share your detailed research data in a repository.

Standardize Identifying Info: try to use the same name throughout your career as well as the name of your affiliated institution. Using common "official" names will allow for consistency and easy retrieval of your work by author or affiliation.

Bring Colleagues on Board: team-authored articles are cited more frequently, as does publishing with international authors. Working cross-or inter-disciplinarily helps as well.

Beef Up That Paper: use more references, publish a longer paper. Also papers which are published elsewhere after having been rejected are cited more frequently.

Beyond Peer-Reviewed Original Research: Write a review paper. Present a working paper. Write and disseminate web-based tutorials on your topic.

Search Optimization: use keywords in the abstract and assign them to the manuscript. Use descriptive titles that utilize the obvious terms searchers would use to look for your topic, avoiding questions in the title. Select a journal that is indexed in the key library databases for your field.

Market Yourself: create a key phrase that describes your research career and use it. Update your professional web page and publication lists frequently. Link to your latest and greatest article in your professional email signature file.

Utilize Social Media: Use author profiles such as ResearcherID and ORCID. Contribute to Wikipedia, start a blog and/or podcast, join academic social media sites.

Improve the visibility of your research

Make your research available to the widest possible audience and improve the discoverability of your material by adopting one or more of the following strategies:

Make material available via open access

- Remove journal subscription cost barriers so material is freely available online.
- For example, publish in open access journals or deposit in the institutional repository [IOE ePrints](#)

Use Social Media to promote your article

Build an online profile

By increasing your profile, your contacts and personal impact, you can increase your success rate in the competitive environment of academia.

Maximizing the visibility and impact of your published research

Measuring the inter-and cross-disciplinary impact of your published research can be a valuable indication of the achievement of both an individual or unit and can play a role in a number of decision making processes including:

Identifying Research Trends including:

- **Impact:** Examine the dispersion of cited and citing works both within and across **disciplines and geographic boundaries** to capture the total impact of research collaboration and investment
- **Time:** Consider the longitudinal impact and value of publications i.e. the frequency and distribution both publication output and citation impact over time
- **Prestige:** Capture the scope and prestige of the publication in which the unit publishes
- **Funding and Grant Applications:** profile performance and impact to demonstrate the track-record of a research entity.

eKurs: Visibility and Research Impact

Course Description

Bibliometrics, Scholarly Communication and Publication Strategies

What is my research impact and how can I influence my h-index? How can I use academic identity management and social media for improving my presence on the internet? What is Open Access and are there any support services at the University Library? The course gives an overview of different issues with scholarly publication and improvement of research impact.

Course Contents

The first part of the course covers these topics

- academic identity management
- citation analysis, impact factor, h-index and alternatives

For the second part, we offer a range of topics to choose from

- academic networking and your presence on the internet
- current awareness - how to keep up-to-date in your research area

- > Get in Contact
- > Searching & Finding
- > Borrowing & Ordering
- > Studying & Working
- > Publishing & Citing

Promoting your paper

There are many ways to promote your published paper. The publisher and the editorial team are likely to have a strategy to promote your paper. In addition, a list of suggested promotional options follows:

- Twitter and Facebook
- Email lists
- LinkedIn
- Wikipedia
- Blogs
- Academic social networking sites, such as *MyNetResearch* and *Academicci*
- YouTube
- Internet search engines

Coalitions and scholarly publishing

The following may be of use:

- [Scholarly Publishing and Academic Resources Coalition \(SPARC\)](#) - provides information on alternative scholarly communication strategies
- [Directory of Digital Publishing Projects](#)
- [Association of American University Presses](#)

Social media presentation

[Finding information](#)

Improving your citations

[Support and training](#)

There are a number of ways to improve your citation rate.

[Inductions and
Information Skills](#)

Where and how you publish

Making your research available as open access means that it is open to anyone, and there is a lot of evidence that says readership leads to higher citation counts. Most journals allow you to put the author accepted version of the article into charge to make the final published version available freely. Your work is still published by the same journal, but it can be seen by a much larger audience than just the subscribers to the journal.

[MyReading](#)[Library collections](#)

Clear titles and abstracts

[Open access](#)

As most research is now discovered through a search engine, it is important to make your title clearly indicate the content. It is obvious to searchers who may spend only a few seconds to decide if they want to read an article. Similarly a clear, well-written abstract also helps your article rank better in searches and lead more people to go to the full text. The **LSE** publishes an impact blog with very good posts on this

Increase the Visibility of Your Research

 [Comments\(0\)](#)  [Print Page](#)

Search:

[Catalog](#)  [Search](#)

Increase the Visibility of Your Research

Methods for increasing visibility vary by discipline.

Suggested strategies:

1. Include publications in an open repository so google will track when you've been cited:
 - an **Institutional Repository** - such as the [Digital Repository at the University of Maryland \(DRUM\)](#) - and provide full-text of it ([if publisher allows](#)).
 - a **Subject Repository** - such as [AgEcon Search](#), [arXiv.org](#), [RePEc](#), [SSRN](#), etc.
2. Publish in an **Open Access** journal or self-archive it ([if publisher allows](#)).
3. Publish/share **data** associated with your research - for more information see
 - [Data & Text Repositories](#) guide (Iowa State University)
 - [Sharing Detailed Research Data is Associated with Increased Citation Rates](#) (PLOS ONE)
 - [Contact Research Data Services](#)
4. Publish in an **online journal with search features** allowing users to find articles that cite it. For example, see "cited by" features in [Highwire Press](#) journal articles.
5. Share publications using **social networking tools** such as [Mendeley](#), [ResearchGate](#), [CiteULike](#), [getCITED](#), [twitter](#), [Slideshare](#), [blogs](#), etc.
6. **Create an online presence** utilizing tools such as [ORCID ID](#), [Researcher ID](#), [Google Scholar](#)

Improving Research Visibility – Getting Data on the Institutional Repository RADAR

This case study highlights collaboration between Arts and Humanities researchers and the RADAR institutional repository at Oxford Brookes University. The University's Sonic Art Research Unit (SARU) aims to make data a more visible research output, and improve the chances of it being accessible to researchers over the long-term through RADAR.

Increasing your citation rates

There are a number of ways that you can improve your citation rates as a researcher, here are some suggestions, based on this [literature review on improving citation counts](#), conducted in March 2014:

- **Make research outputs open access where possible**
Evidence shows that [open access](#) articles are cited significantly more than non-open access articles.
- **Where funding permits publish using the gold open access route where possible**
Publishing via the [Gold open access](#) route can result in research being made open access immediately for other researchers to read and cite.
- **Share your research data where possible**
Evidence suggests that clinical trials which shared their data were more frequently cited than trials that did not. Sharing [research data](#) can make research more accessible and visible.
- **Use a consistent author name**
Evidence shows that using a consistent author name throughout a research career can help to enhance retrieval of a researcher's output. Changing names throughout a career can make it difficult to associate research output

5 step process for promoting your research

Congratulations! You've just received confirmation from the journal that the hard part is over; now it's time to start spreading the word around your findings and analysis.

Here's a five-step process outlining how you can help the AHC public relations team raise awareness of your research.

1. **Contact your [academic unit's communicator](#).** If your unit doesn't have a dedicated communicator, **reach out to us directly at health@umn.edu** .

Workshop: **Managing Your Online Presence as a Researcher**, Feb. 10 and 12

Posted on [February 5, 2015](#) by Jennifer Hart at Crerar Science

When:	Tuesday, February 10, 4–5 PM or Thursday February 12, 12-1PM
Where:	Crerar Library, Kathleen Zar Room 5730 South Ellis Avenue, Chicago, IL
Description:	You want to establish an effective online presence, but what are the best ways to make your identity visible to potential collaborators? Join us for a 60 minute workshop to learn how to build your online profile as a scholar/researcher. We'll cover online scholarly communities, author identifiers (like ORCID), and other ways to carve out a space online for your professional self. Another session of this same workshop will be held on February 12th at 12pm. See more info link for details.

Abstract

We have adapted a bacterial CRISPR RNA/Cas9 system to precisely engineer the *Drosophila* genome and report that Cas9-mediated genomic modifications are efficiently transmitted through the germline. This RNA-guided Cas9 system can be rapidly programmed to generate targeted alleles for probing gene function in *Drosophila*.

CRISPR RNA Cas9 homologous recombination genome engineering *Drosophila*

Why should I care about my online presence?

- To increase the visibility & accessibility of published paper
- To increase the chance of getting publications cited
- To make your research and teaching activities known
- To disseminate the publications by using “Research Tools” effectively
- To increase publications chances of being found, read and cited
- To increase the chance of research collaboration
- To trace the citation
- To serve society better

Why citation is important?

- In the Times Higher Education World University Rankings system Citations — research influence (worth 30 per cent).
- Citations are widely recognised as a strong indicator of the significance and relevance — that is, the impact — of a piece of research.
- However, citation data must be used with care as citation rates can vary between subjects and time periods.
- For example, papers in the life sciences tend to be cited more frequently than those published in the social sciences.
- The rankings this year use normalised citation impact, where the citations to each paper are compared with the average number of citations received by all papers published in the same field and year. So a paper with a relative citation impact of 2.0 is cited twice as frequently as the average for similar papers.
- The data were extracted from the Thomson Reuters resource known as Web of Science, the largest and most comprehensive database of research citations available.
- Its authoritative and multidisciplinary content covers more than 11,600 of the highest-impact journals worldwide. The benchmarking exercise is carried out on an exact level across 251 subject areas for each year in the period 2004 to 2008.
- For institutions that produce few papers, the relative citation impact may be significantly influenced by one or two highly cited papers and therefore it does not accurately reflect their typical performance. However, institutions publishing fewer than 50 papers a year have been excluded from the rankings.
- There are occasions where a groundbreaking academic paper is so influential as to drive the citation counts to extreme levels — receiving thousands of citations. An institution that contributes to one of these papers will receive a significant and noticeable boost to its citation impact, and this reflects such institutions' contribution to globally significant research projects.

First version: Nov. 2006

It is important to note that there is no substitute for quality work. Please do carry out path-breaking research and produce outstanding results by demonstrating their usefulness both theoretically and experimentally. It is equally important to enhance its impact by making the outcomes of your research work easily accessible to your peers and the larger community. Your efforts and willingness to genuinely share research outcomes with the community will lead to better citations to your work. This in turn leads to other outcomes and recognitions such as increased chances of (a) receiving invitations to present seminars and possibly keynote talks at conferences; (b) getting surprise emails from prospective employers; (c) obtaining industrial consulting opportunities; (d) gaining media attention; (e) winning grants, (f) attracting brilliant students, (g) receiving promotions, and so on and so forth. If all goes well, you might one day become a celebrity intellectual!

Citation manipulation: Journal retracts paper because author boosted references to a journal he edits

with 5 comments

A group of researchers have lost a paper in a computer science journal because they were apparently using its references to help the impact factor of a different journal that one of them edits.

Here's the [notice](#) for "Impacts of sensor node distributions on coverage in sensor networks," a paper first published in 2011 and cited four times, according to Thomson Scientific's Web of Knowledge: [Read the rest of this entry »](#)

Share this:

Source: <http://retractionwatch.com/2014/02/03/citation-manipulation-journal-retracts-paper-because-author-boosted-references-to-a-journal-he-edits/>

1-Use a unique name consistently throughout academic careers

The preferred form of an author's name is **first name** and **last name**; this form reduces the likelihood of mistaken identity. **Use the same name for publication throughout your career**; that is, do not use initials on one manuscript and your full name on another one. Determining whether **Juanita A. Smith** is the same person as **J. A. Smith**, **J. Smith**, or **A. Smith** can be difficult, particularly when citations span several years.

2- Use a standardized institutional affiliation and address

Recommended Affiliation Citation

Use This:

Mae O. Gordon
Department of Ophthalmology and Visual Sciences
Washington University School of Medicine in St. Louis
660 South Euclid Avenue
Saint Louis, Missouri 63110
United States of America

Not This:

M. Gordon
Dept. of Ophthal. and Vis. Sci.
Wash. U. Sch. Med.
660 S. Euclid Ave.
St. Louis, MO

Source: <https://becker.wustl.edu/impact-assessment/strategies>

3- Repeat key phrases in the abstract while writing naturally

The abstract is the main place that a search engine will take the data from which determine where your article should place in its results:

Including the keywords and key phrases in your abstract is one of the best ways to optimize your article on search engines. It allows Google to assess your article for its relevance to certain search terms

After you've ensured you have chosen the best keywords and you have deployed them in the right ways in your abstract and title, make sure you use them throughout your article: consider using them in subheadings, within the titles of figures and tables, as well as in the main body of the text. Search engines can also look at these places

Consider the first sentence of your abstract – this is visible within the Google search results, therefore your first sentence should get straight to the points and include strong keywords. See the example below:

[Emerald | Celebrity endorsement, brand credibility and brand equity](#)

www.emeraldinsight.com/journals.htm/journals.htm?...show...

by A Spry - 2011 - Cited by 11 - Related articles

Purpose – This research aims to examine the impact of **celebrity credibility** on consumer-based **equity** of the **endorsed brand**. The mediating role of **brand ...**

4-Select a proper title

As an author, you can dramatically improve the chances of your article being downloaded once it's online, before you even submit it!

There are three easy steps you can take to ensure it enjoys high usage:

[Choose a descriptive title](#)

[Use appropriate keywords](#)

[Write an informative abstract](#)

Source: <http://www.emeraldinsight.com/authors/guides/promote/optimize1.htm>

Optimize Title/Abstract

Step 1: Construct a clear, descriptive title

In search engine terms, the title of your article is the most interesting element. The search engine assumes that the title contains all of the important words that define the topic of the piece and thus weights words appearing there most heavily.

Step 2: Reiterate key phrases

The next most important field is the text of the abstract itself. You should reiterate the key words or phrases from the title within the abstract itself.

Source: <http://authorservices.wiley.com/bauthor/seo.asp>

Well-Optimized Abstract:

False Remembering in the **Aged**

Researchers studying human **memory** have increasingly focused on **memory** accuracy in **aging** populations. In this article we briefly review the literature on **memory** accuracy in healthy older adults. The prevailing evidence indicates that, compared to younger adults, older adults exhibit both diminished **memory** accuracy and greater susceptibility to misinformation. In addition, older adults demonstrate high levels of confidence in their **false memories**. We suggest an explanatory framework for the high level of **false memories** observed in older adults, a framework based on the theory that consciously controlled uses of **memory** decline with **age**, making older adults more susceptible to **false memories** that rely on automatic processes. We also point to future research that may remedy such deficits in accuracy.

*This article appears on the first page of results in Google for **false+memory+aged**.*

Source: <http://authorservices.wiley.com/bauthor/seo.asp>

Poorly Optimized Abstract:

False *Remembering in the Senior Population*

Researchers studying human **memory** have increasingly focused on its accuracy in senior populations. In this article we briefly review the literature on such accuracy in healthy older adults. The prevailing evidence indicates that, compared to younger adults, older adults exhibit both diminished accuracy and greater susceptibility to misinformation. In addition, older adults demonstrate high levels of confidence in their **false memories**. We suggest an explanatory framework for the high levels observed in older adults, a framework based on the theory that consciously controlled uses of **memory** decline in later life, making older adults more susceptible to **false memories** that rely on automatic processes. We also point to future research that may remedy such deficits in accuracy.

Sort by:

Titles: be simple and specific

- Use active rather than passive verbs.
- Avoid words that don't add to the story such as: “on this”, “study”, and “investigation”.
- Be specific in delivering your message:
- Not every reader may know [what Akt and Foxo1 are](#), but the title is declarative and specific. “But don't be *too* specific”.
- When possible, avoid acronyms and other jargon, which renders the title opaque to readers not already conversant in the field.
- Avoid question marks: titles should present outcomes, without teasing the reader.
- Focus on what is novel in the work.
- Avoid complex, compound nouns. For example, the term “excess water-weight remover”.

Source: <http://blogs.nature.com/naturejobs/2015/07/10/publishing-high-impact-papers-natures-way>

5-Select/Make a brand name

- ***Make a unique phrase that reflects author's research interest and use it throughout academic life.***
- Add the name of study in the title of all publications and use the same title/name consistently.

6- Assign keyword terms to the manuscript

Selecting keywords lead to get more citation.

7- Use more references

The image is a screenshot of a news article on the Nature website. At the top, the "nature" logo is displayed in white on a dark red background, with the tagline "International weekly journal of science" below it. A navigation bar contains links for "nature news home", "news archive", "specials", "opinion", "features", and "news blog". A yellow banner below the navigation bar reads "Take our survey for a chance to win a MacBook Air." The article's main content area has a dark red header with the word "News" in white. The article title is "An easy way to boost a paper's citations" in a large, bold, dark font. Below the title is a sub-headline: "An analysis of over 50,000 Science papers suggests that it could pay to include more references." The author's name, Zoë Corbyn, is listed below the sub-headline. The article text begins with "A long reference list at the end of a research paper may be the key to ensuring that it is well cited, according to an analysis of 100 years' worth of papers published in the journal Science." To the right of the text is a photograph of a tall stack of papers. On the left side of the page, there are sections for "Comments on this story" (with a speech bubble icon), "Stories by subject" (listing "Lab life" and "Policy"), and "Stories by keywords" (listing "Citations", "Citation counts", "Scientific articles", "Bibliometrics", and "Journals"). At the bottom left, a URL "www.nature.com/news/newwhere" is partially visible.

- [h-index](#)
- [Bibliometrics](#)

Brevity is not the secret to scientific success.

Philip Ball

Researchers could **garner** more citations simply by making their papers longer, a study seems to imply.

In an analysis of 30,027 peer-reviewed papers published between 2000 and 2004 in top astronomy journals, astronomer Krzysztof Stanek of Ohio State University in Columbus found that the median number of citations increases with the length of the paper — from just 6 for papers of 2–3 pages to about 50 for 50-page papers¹.

9- Write a review paper

10-Present a working paper

Working papers are freely available before and after the articles are published. Researchers may upload their working papers into open access repositories including the personal websites or more formal repositories such as arXiv and SSRN.

11-To be the best, cite the best

Published online 13 October 2010 | Nature | doi:10.1038/news.2010.539
News

To be the best, cite the best

Citation analysis picks out new truth in Newton's aphorism that science 'stands on the shoulders of giants'.

The mass of medium-level research is less important for inspiring influential breakthroughs than the most highly-cited papers, a citation study argues.

Source: Corbyn, Z. (2010). [To be the best, cite the best. Nature 539. doi: doi:10.1038/news.2010.539](https://doi.org/10.1038/news.2010.539)

12-Self Citation

“Self-citation refers to a paper being submitted to a specific journal in which papers that have been published during the previous 2 years in that same journal are cited in the reference list. While self-citation of relevant papers is legitimate, excessive self-citation can indicate a manipulation.

Thomson Reuters resource known as Web of Science, the company which now lists journal impact factors, considers self-citation to be acceptable up to a rate of 20%, anything over that is considered suspect” (Diana Epstein, 2007).

- [Source: Diana Epstein, Impact factor manipulation, The Journal of the European Medical Writers Association, Vol. 16, No. 3, 2007](#) ©2016-2017 Nader Ale Ebrahim

13-Co-authorship internationally

- Citation analysis shows that papers with international co-authors are cited up to **four times** more often than those without international co-authors.

Source: <http://www.bath.ac.uk/library/services/eprints/improve-citations.pdf>

14- Publish papers with a Nobel laureates

- Some landmark papers of Nobel laureates quite quickly give their authors a sudden boost in citation rate and this boost extends to the author's earlier papers too, even if they were in unrelated areas ([Ball 2011](#)).

15-Publish your article in one of the journals everyone in your discipline reads

- Choosing a journal that matches with a researcher's field of study is thus very important because it makes it more likely that the article receives more citation. A journal which covers a broad range of disciplines may be the best.

16-Publish your work in a journal with the highest number of indexing

1. ABI/INFORM
2. Association of Business Schools' (ABI) Academic Journal Quality Guide (www.the-abs.org.uk)
3. Australian Business Deans' Council (ABDC) Journal Quality List
4. Australian Research Council ERA Ranked Journal List
5. Compendex
6. Computer Abstracts International Database
7. Current Contents / Engineering, Computing & Technology
8. Current Contents / Social & Behavioural Sciences
9. Emerald Management Reviews (EMR)
10. INSPEC Abstracts
11. [International Abstracts in Operations Research](#)
12. OR/MS Index and Annual Comprehensive Index
13. Science Citation Index
14. Social Science Citation Index
15. SCOPUS
16. Zentralblatt MATH

- [Source: Journal of the Operational Research Society](#)

17- Publish in an Open Access (OA) journal

- One key request of researchers across the world is unrestricted access to research publications. Open access gives a worldwide audience larger than that of any subscription-based journal and thus increases the **visibility** and **impact of published** works. It also **enhances indexing**, retrieval power and eliminates the need for permissions to reproduce and distribute content.

18-Publish in a journal with high impact factor

- The most effective strategy to increase citation rates is publishing in a journal with higher impact factor ([Vanclay 2013](#)).
- [Dhawan and Gupta \(2005\)](#) studied 1101 papers and found that articles published in high impact factor journals increase the probability of getting cited.

19-Team-authored articles get cited more

- [Wuchty et al. \(2007\)](#) have used 19.9 million papers over 50 years and demonstrated that team-authored articles typically produce more frequently cited research than individuals.
- A recent study by [Cotropia and Petherbridge \(2013\)](#) in law review articles which were published within two decades also demonstrated that team research is on average more frequently cited than individual research.
- Typically high cited articles are authored by a large number of scientists ([Aksnes 2003](#)).

20-Use a larger number of “callouts”

- A “callout” is a phrase or sentence from the paper that is displayed in a different font, somewhere in the paper.
- Papers with a larger number of “callouts” be likely to receive a higher number of citations ([Hamrick et al. 2010](#)).
- Generally, callouts are inserted by the editorial staff to call attention to potentially interesting aspects of a paper ([Hamrick et al. 2010](#)).

21- Publish across disciplines

- Publishing across disciplines has been found to increase citation e.g. chemistry, biological science and physics ([Ortega and Antell 2006](#)).

22- Publish tutorials papers

- Tutorial paper is “a paper that organizes and introduces work in the field.
- A tutorial paper assumes its audience is inexpert; it emphasizes the basic concepts of the field and provides concrete examples that embody these concepts ([ACM 2013](#))”.
- Tutorials papers tend to have a higher number of citations ([Hamrick et al. 2010](#)).

23-Self-archive articles

- Free online availability increases a paper's impact ([Lawrence 2001](#));
- Freely accessible articles increase citations by 50% or more ([Harnad 2006](#)).
- [Gargouri et al. \(2010\)](#) have made a strong and a declarative link between self-archiving and increased citation performance.

Read more: Ale Ebrahim, N., Salehi, H., Embi, M. A., Habibi Tanha, F., Gholizadeh, H., Motahar, S. M., & Ordi, A. (2013). [Effective Strategies for Increasing Citation Frequency](#). *International Education Studies*, 6(11), 93-99. doi: 10.5539/ies.v6n11p93

24-Keep your professional web pages and published lists up to date

WHAT IS A GOOD SCIENTIFIC ARTICLE?

Novelty

Communication

25-Deposit paper in Open Access repository

Size of OA citation advantage when found (and where explicitly stated by discipline)	% increase in citations with Open Access
Physics/astronomy	170 to 580
Mathematics	35 to 91
Biology	-5 to 36
Electrical engineering	51
Computer science	157
Political science	86
Philosophy	45
Medicine	300 to 450
Communication studies (IT)	200
Agricultural sciences	200 to 600

Effect of Open Access (OA) to increase the level of citations ([Swan 2010](#)).

26-Join academic social networking

- Increasing the availability of articles through social networking sites broadens dissemination, increases use, and enhances professional visibility.
- Academia is an online social reference tool that allows reference sharing among academics and researchers. Alternatively, researchers may use Citeulike to share their interests in research publications ([Wong 2008](#)). Academia, Citeulike, ResearchGate and LinkedIn are just a few examples of knowledge sharing tools to make others aware of research articles that may be of relevance to authors and hence get cited.

Read more: Ale Ebrahim, N., Salehi, H., Embi, M. A., Habibi Tanha, F., Gholizadeh, H., Motahar, S. M., & Ordi, A. (2013). [Effective Strategies for Increasing Citation Frequency](#). *International Education Studies*, 6(11), 93-99. doi: 10.5539/ies.v6n11p93

27-Start blogging

- Use blogs and podcasts to leverage on-going researcher discussion on the Internet ([Taylor & Francis Group 2012a](#)).
- Web 2.0 tools such as wikis and blogs can be created to inform, describe and link people's research interests and publications ([Wong 2008](#)).

JohnRTurner_HPT_resource

This blog is intended to share information, discuss new research, and identify new trends within the Human Performance Technology (HPT) field. HPT is a multi-disciplinary practice that is influenced by a number of cognate disciplines: psychology, systems theory, education, economics, and sociology - to name only a few.

About Me

 John R. Turner

John R. Turner is a Doctoral Candidate at the University of North Texas in the applied technology and performance improvement (ATPI) program. He started his career in mechanical engineering where he was employed for 15 years. After leaving the engineering service industry, he completed a second bachelor's degree in psychology from the University of Arkansas at Little Rock, followed by a master's degree in human resource development from the University of Texas at Tyler. His research interests are in teams, team cognition, knowledge management, performance improvement, theory building, multilevel models, meta-analysis

Why should you share links to your published work online?

According to Dr Melissa Terras from the University College London Centre for Digital Humanities, “If you tell people about your research, they look at it. Your research will get looked at more than papers which are not promoted via social media” ([2012](#)).

28- Create an online CV

- Online CV makes a link between the list of published papers and open access versions of relevant articles ([Sahu 2005](#)). Online CV increases researchers' output visibility to the academic community.

Virtual team

From Wikipedia, the free encyclopedia

A **virtual team** (also known as a **geographically dispersed team**, **distributed team**, or **remote team**^[1]) is a group of individuals who work across time, space and organizational boundaries with links strengthened by webs of **communication technology**.^[2] Powell, Piccoli and Ives define virtual teams in their literature review article "as groups of geographically, organizationally and/or time dispersed workers brought together by information and telecommunication technologies to accomplish one or more organizational tasks."^[3] **Ale Ebrahim, N.**, Ahmed, S. & Taha, Z. in a 2009 literature review paper, added two key issues to definition of a virtual team "as **small temporary groups of geographically, organizationally and/ or time dispersed knowledge workers** who coordinate their work predominantly with electronic information and communication technologies in order to accomplish one or more organization tasks".^[4] Members of virtual teams **communicate electronically** and may never meet **face-to-face**. Virtual teams are made possible by a proliferation of **fiber optic technology** that has significantly increased the scope of off-site **communication**.^[5] Virtual teams allow companies to procure the best talent without geographical restrictions.^[5] According to Hambley, O'Neil &

30-Create a podcast describing the research project and submit the podcast to YouTube or Vimeo

- Research is not just text and figures. Create a podcast describing the research project and submit the podcast to YouTube or Vimeo ([Sarli and Holmes 2011](#)).
- Video is an increasingly important way for researchers to communicate their results ([Sarli and Holmes 2011](#)).

31-link your latest published article to your email signature

- A great way to spread researchers' outputs and get extra attention of email recipient is to add a link to the latest publication. This little section of contact information that most people ignore, provides a good platform for publication marketing.

Example:

32-Make your research easy to find, especially for online searchers

Search engines estimate the content's relevancy and popularity as measured by links to the content from other websites. Most search engines attempt to identify the topic of the piece of content. To do this, some search engines still use **metadata tags (invisible to the user)** to assess relevant content, but most now scan a page for **keyword phrases**, giving extra weight to phrases in headings and to repeated phrases.

Abstract
 Physical activity and aging research has burgeoned in the past few decades. Despite the increase in scholarly publications no attempts have been made to summarize the publication landscape and to identify works that had great impact to physical activity and aging research. We conducted a bibliometric analysis and collected publication data from 1980 to February 6, 2015 in the Web of Science Core Collection. Of the overall 9,935 publications most were published after 2007 and almost 60% were in the category of Geriatrics and Gerontology or Sport Sciences. [Hinhiv cited](#)
