# Abstract

Preparation of a literature review can be divided into five general stages:

1. Define your topic
2. Search for materials
3. Evaluate what you have found
4. Analysis and interpretation
5. Reporting the review

This presentation provides tools and techniques for conducting an effective literature review.

# Nader Ale Ebrahim

- [Semināra](#)
- [Budapest Open Access Initiative](#)

# What is a literature review

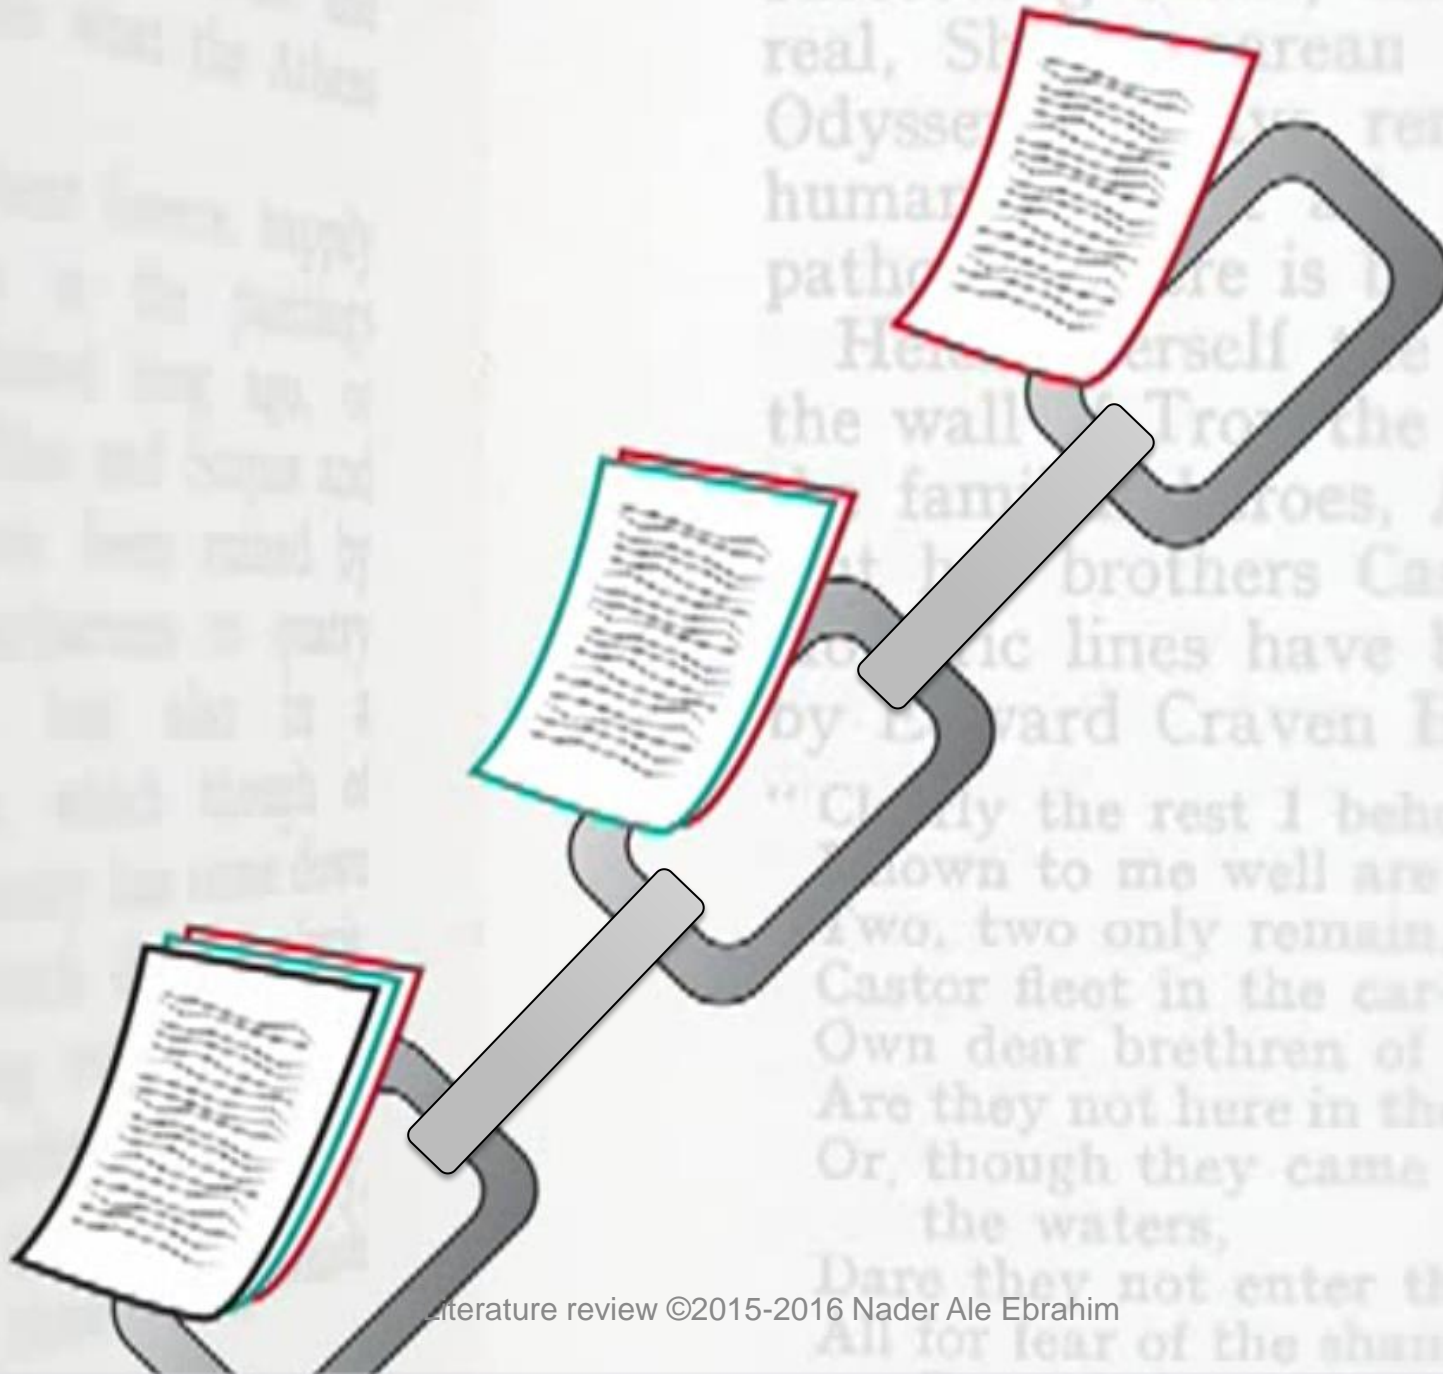

A literature review discusses published information in a particular subject area, and sometimes within a certain time period.

A literature review can be just a simple summary of the sources, but it usually has an organizational pattern and combines both summary and synthesis. A summary is a recap of the important information of the source, but a synthesis is a re-organization, or a reshuffling, of that information. It might give a **new interpretation of old material** or **combine new with old interpretations**. Or it might **trace the intellectual progression of the field**, including major debates. And depending on the situation, the literature review may **evaluate the sources and advise the reader** on the most pertinent or relevant

Source: <http://writingcenter.unc.edu/handouts/literature-reviews/>

# Reasons for reviewing the literature

- To conduct a 'preliminary' search of existing material;
- To organise valuable ideas and findings;
- To identify other research that may be in progress;
- To generate research ideas;
- To develop a critical perspective.

**Justify your  
research**

# The literature review

## **In your literature review, you should:**

- **clarify your understanding of the field**
- explain the rationale for your research
- place your research within a broader context
- **evaluate the results of previous research**
- **define key concepts and ideas**
- **identify research in related areas that are generalisable or transferable to your topic**
- **identify relevant methodological issues.**

UNE. 2009. The literature review [Online]. University of New England. Available:  
<http://www.une.edu.au/library/eskillsplus/literature/litreview.php> [Accessed 25 January 2010].

# The literature review

A literature review ensures that you are at least familiar with the body of research in your field before starting your own investigations. Writing a literature review also provides practice in critical thinking. Once you have applied critical thinking skills to the findings of past researchers, you are in a better position to apply these same skills to your own work.

UNE. 2009. The literature review [Online]. University of New England. Available: <http://www.une.edu.au/library/eskillsplus/literature/litreview.php> [Accessed 25 January 2010].

# Critical reading -1

Critical reading is the process of reading that goes beyond just understanding a text. Critical reading involves:

- Carefully considering and evaluating the reading
- Identifying the reading's strengths and implications
- Identifying the reading's weaknesses and flaws
- Looking at the 'big picture' and deciding how the reading fits into the greater academic context (the understandings presented in other books and articles on this topic)

# Critical reading -2

Critical reading often involves asking questions about the reading. In particular, you are examining the strengths and weaknesses of the reading's argument. To do this, you need to consider:

- the reading's background
- its purpose and overall conclusion (claim)
- the evidence used in the reading
- the logical connections between the claim and the evidence
- the reading's balance
- its limitations
- how it relates to other sources and research
- if the reading is based on research, how this research was conducted

# Questions to ask yourself

Why am I reading this? (helps to focus on your subject)

What is the author trying to do in writing this?

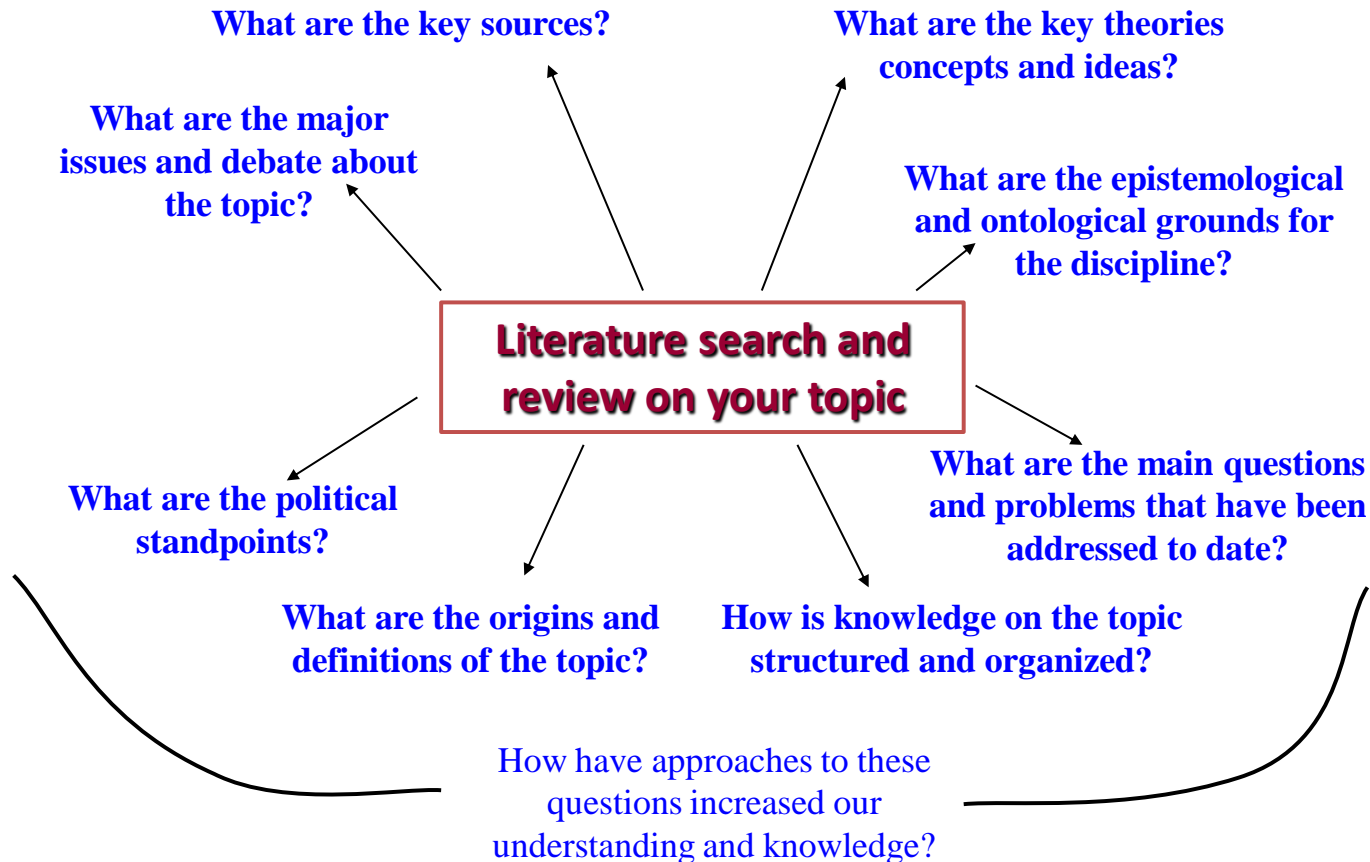

(helps deciding how valuable for your purpose)

How convincing is this?

What use can I make of this reading?

Adapted from Wallace and Wray (2006)

# Some questions that the review of literature can answer

# Systematic Review 1/2

- A systematic literature review is a means of identifying, evaluating and interpreting all available research relevant to a particular research question, or topic area, or phenomenon of interest. Individual studies contributing to a systematic review are called *primary studies*; a systematic review is a form a secondary study.

# Systematic Review 2/2

- A **systematic review** is a literature review focused on a research question that tries to identify, appraise, select and synthesize all high quality research evidence relevant to that question.

Source: [http://en.wikipedia.org/wiki/Systematic\\_review](http://en.wikipedia.org/wiki/Systematic_review)

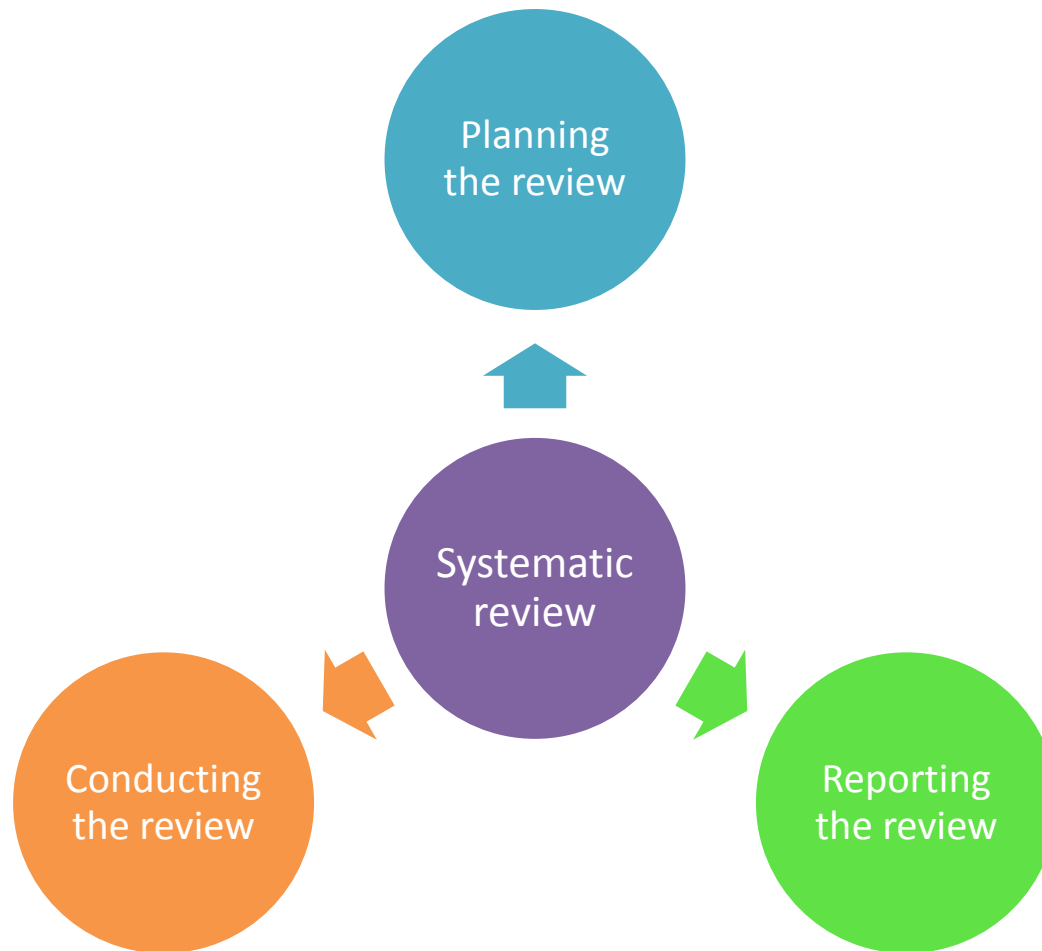

- [A Guide to Writing the Dissertation Literature Review](#)

# Reasons for Performing Systematic Reviews

- **To summarise** the existing evidence concerning a treatment or technology e.g. to summarise the empirical evidence of the benefits and limitations of a specific agile method.
- **To identify any gaps** in current research in order to suggest areas for further investigation.
- **To provide a framework/background** in order to appropriately position new research activities.

However, systematic reviews can also be undertaken to examine the extent to which empirical evidence supports/contradicts theoretical hypotheses, or even to assist the generation of new hypotheses

# The Systematic Review Process

Source: Adapted from [Systematic Review](#)

Literature review ©2015-2016 Nader Ale Ebrahim

# Planning the review

1. Identification of the need for a review
2. Development of a review protocol. (The most important activity during protocol is to formulate the research question.)

# Conducting the review

1. Identification of research
2. Selection of primary studies
3. Study quality assessment
4. Data extraction & monitoring
5. Data synthesis.

## Reporting the review

*Reporting the review  
is a single stage  
phase.*

# Checklist for reading a review paper

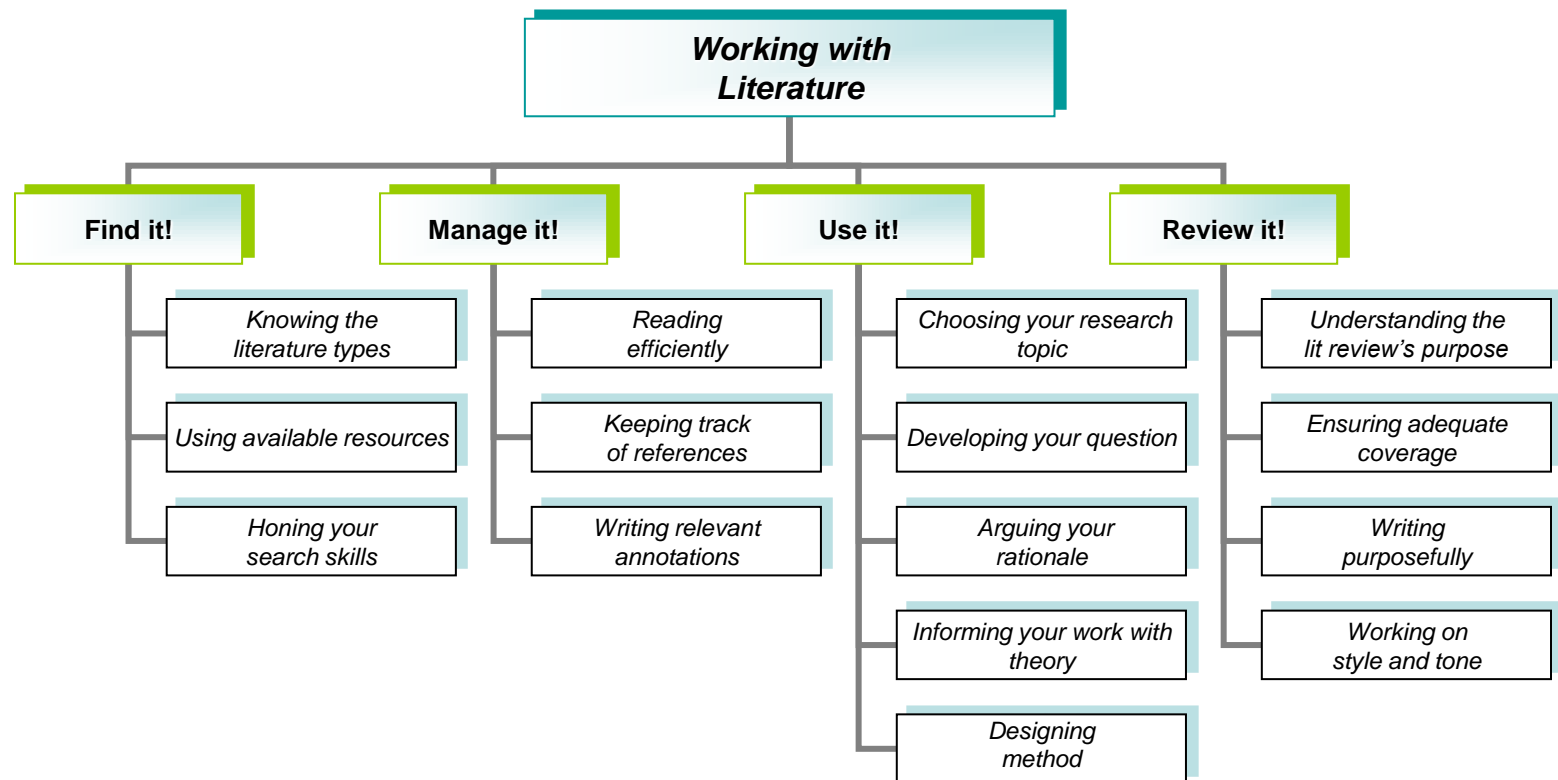

- What are the review's objectives?
- What sources were searched to identify primary studies? Were there any restrictions?
- What were the inclusion/exclusion criteria and how were they applied?
- What criteria were used to assess the quality of primary studies and how were they applied?
- How were the data extracted from the primary studies?
- How were the data synthesised? How were differences between studies investigated? How were the data combined? Was it reasonable to combine the studies? Do the conclusions flow from the evidence?

# Checklist for reading a review paper-From a more general viewpoint

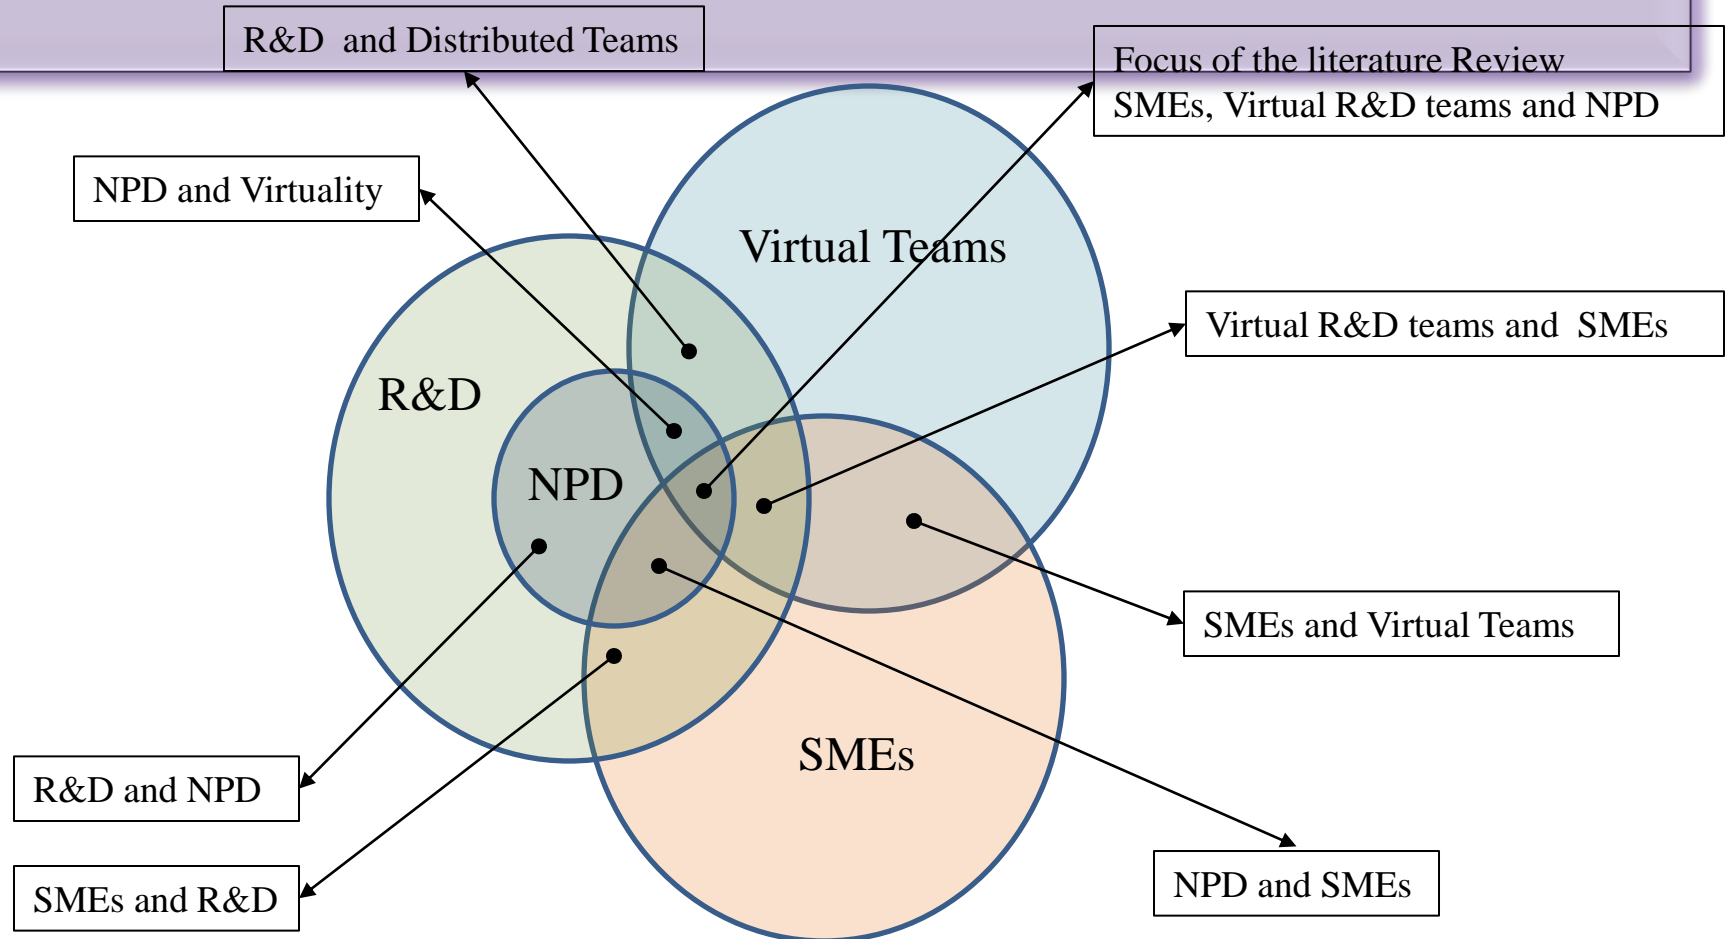

- Can you find an important question, which the review addressed?
- Was a thorough search done of the appropriate databases and were other potentially important sources explored?
- Was methodological quality assessed and the trials weighted accordingly?
- How sensitive are the results to the way that the review has been done?
- Have numerical results been interpreted with common sense and due regard to the broader aspects of the problem?

# Working with literature

# Narrow the area of research

Ale Ebrahim, N., Ahmed, S., & Taha, Z. (2009). Virtual R & D teams in small and medium enterprises: A literature review. [Review]. *Scientific Research and Essay*, 4(13), 1575–1590.

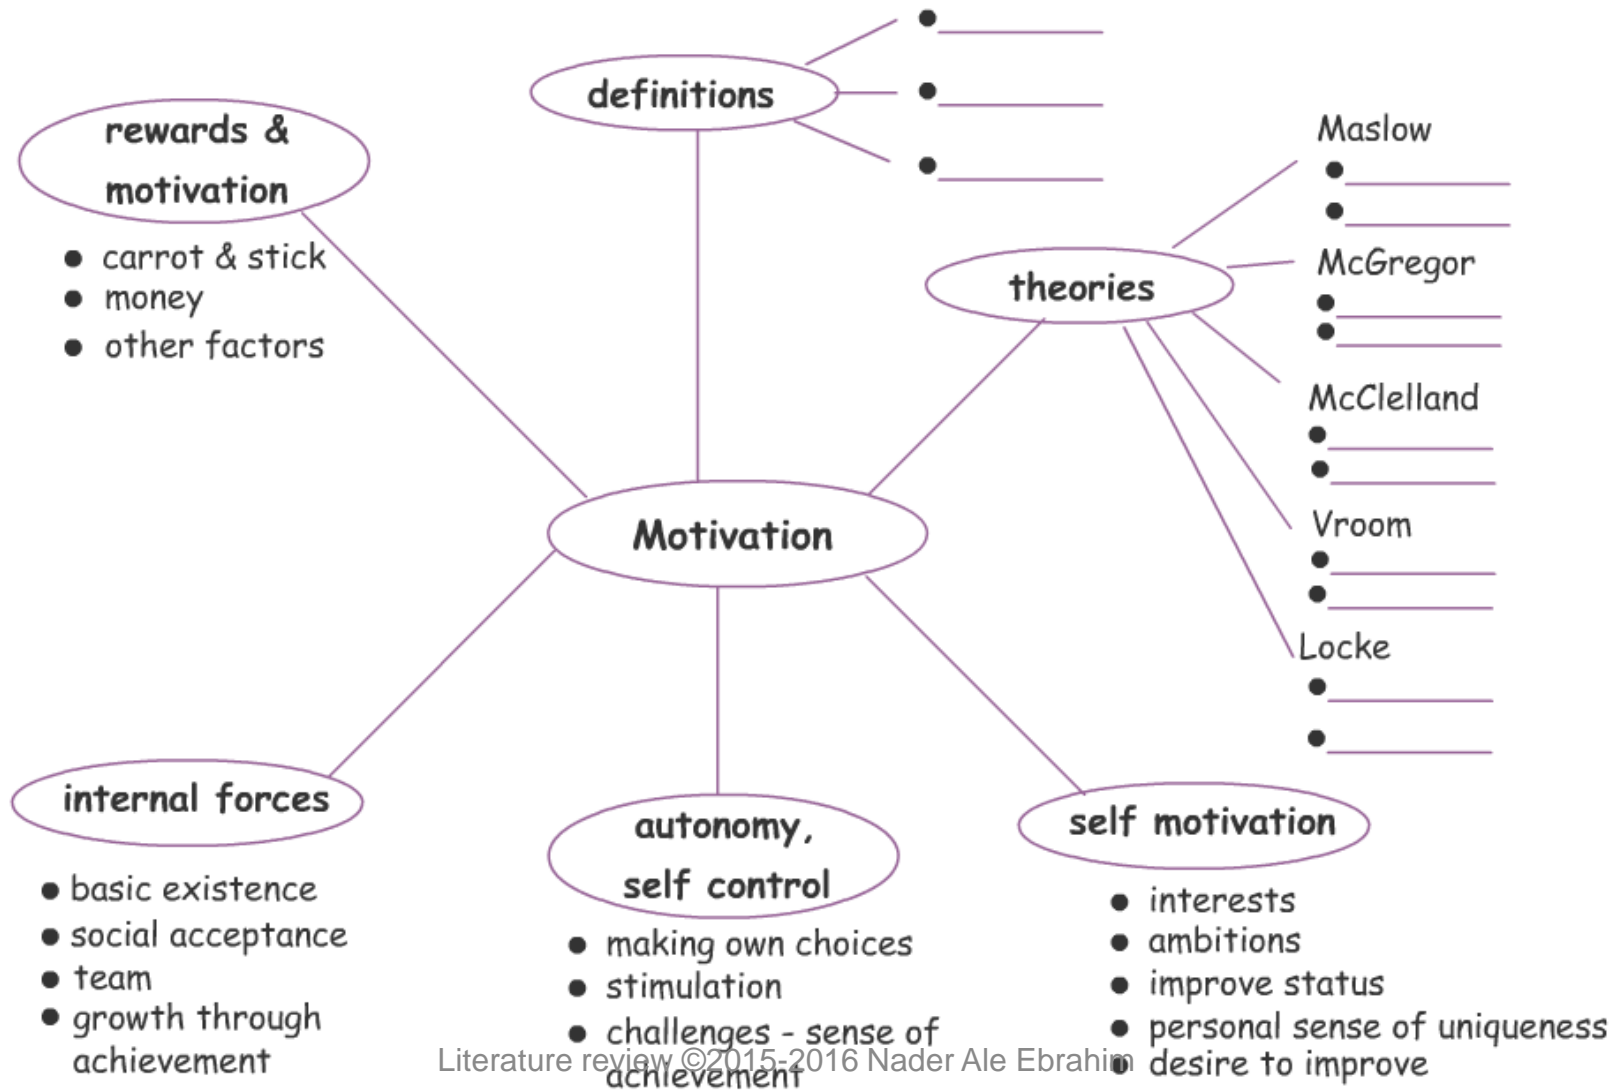

# Structure & planning your writing - MindMaps

MindMaps are a visual map to link and organise key concepts of your research. They also show links and relationships between ideas. Sometimes it is a good idea to number key ideas in the order that you are going to place them in your literature review.

## Example

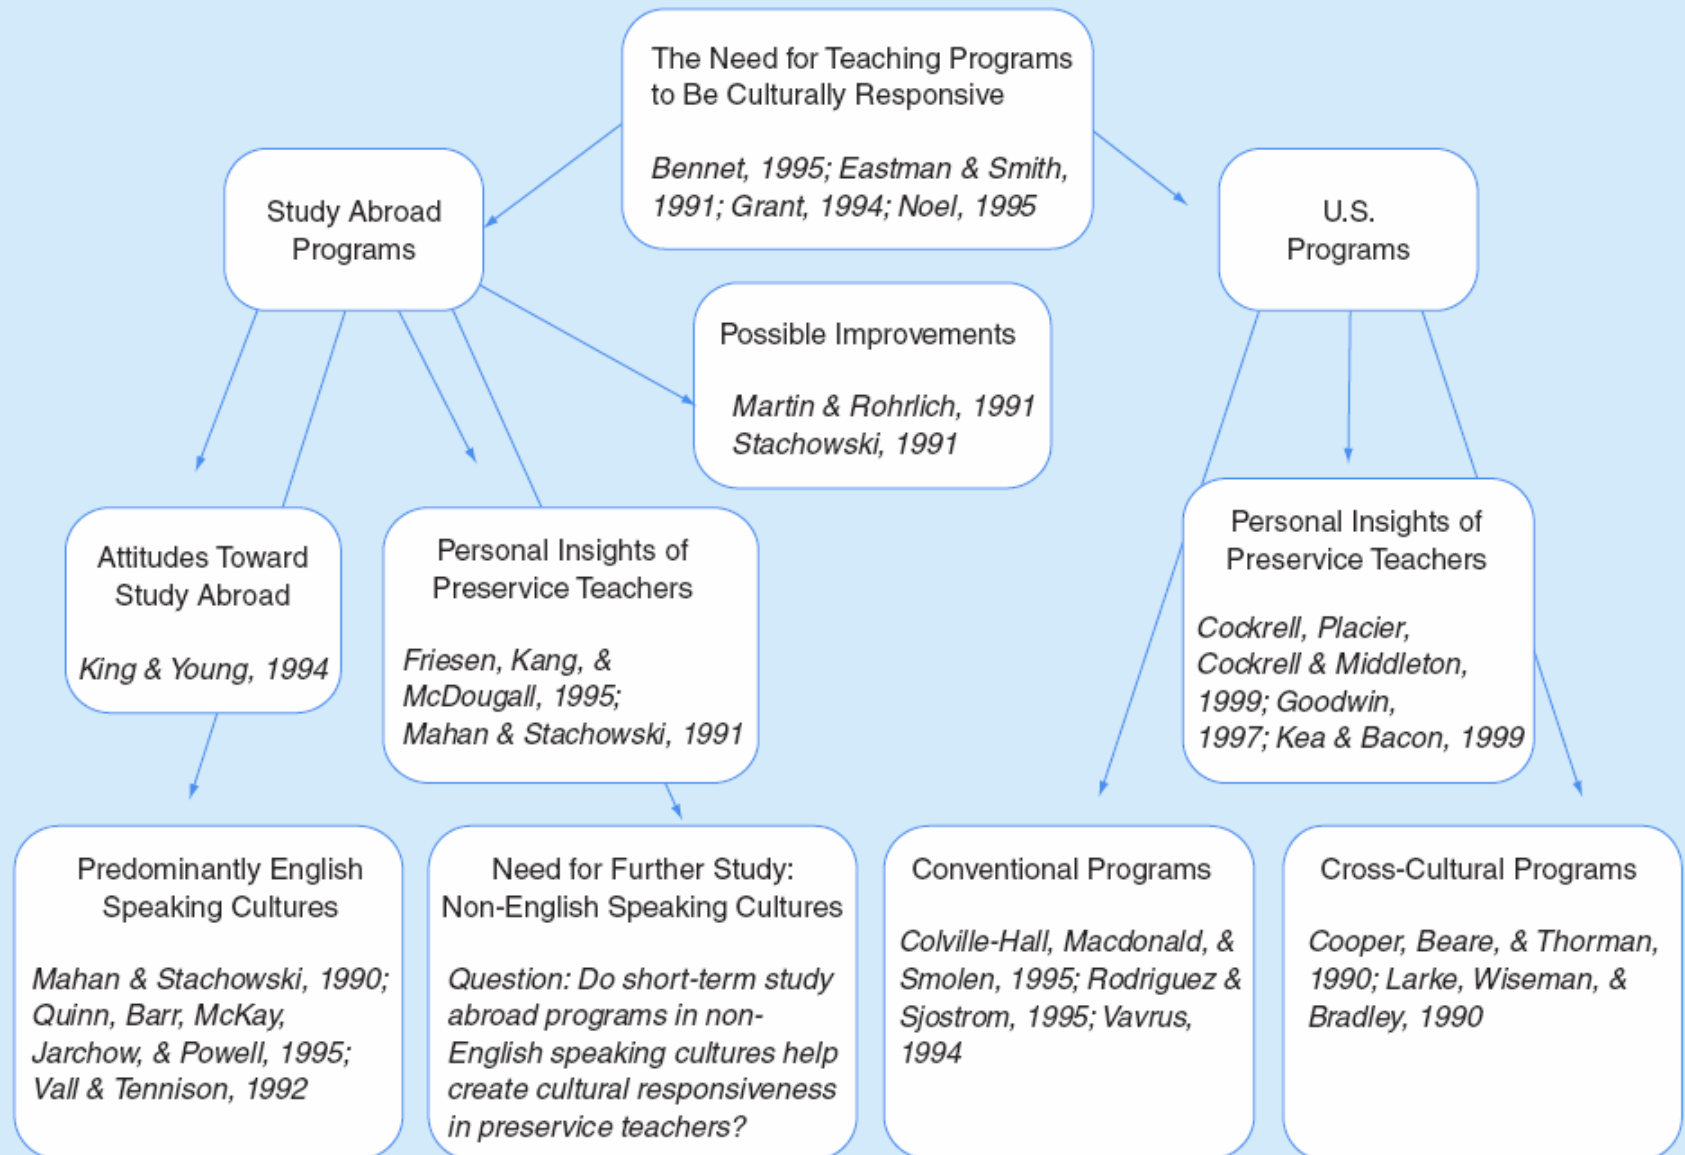

# Example of a MindMap

# A Literature Map, Hierarchical Design

## Literature Map

## A Literature Map, Circular Design

Need for Further Study:

Non-English Speaking Cultures

Question: "Do short-term study abroad programs in non-English speaking cultures help create cultural responsiveness in preservice teachers?"

### Study Abroad Programs

Personal Insights of Preservice Teachers (Friesen, Kang, & McDougall, 1995)

Attitudes Toward Study Abroad (King & Young, 1994)

Predominantly English Speaking Cultures (Mahan & Stachowski, 1990)

### U.S. Programs

Personal Insights of Preservice Teachers (Cockrell, Placier, Cockrell, & Milleton, 1999)

Conventional Programs (Colville-Hall, Macdonald, & Smolen, 1995)

Cross-Cultural Programs (Cooper, Beare, & Thorman, 1990)

Source: Ross' PhD Literature Review Mind Map

# Review biases

- Read outdated version of a paper/book
- Reading but not writing
- Read unlinked papers (detect as much of the relevant literature as possible)
- Read before planning (defining a review protocol that specifies the research question being addressed)
- Start reading with few resources
- Language bias
- Publication bias
- Read everything
- Not keeping bibliographical information

# Identifying a Research Problem

*Researchers begin a study by identifying a research problem that they need to address. They write about this “problem” in the opening passages of their study and, in effect, give you as a reader the rationale for why the study is important and why you need to read their study.*

[Reference: Creswell, J. W. \(2012\). \*Educational research: Planning, Conducting, and Evaluating Quantitative and Qualitative Research\* \(4th ed. ed.\). Boston: Pearson Education, Inc.](#)

# Reviewing the Literature

*With so much information available, searching and locating good literature on your topic can be challenging. Five steps will provide a sense of how researchers proceed in reviewing the literature are:*

- 1. Identify key terms to use in your search for literature.***
- 2. Locate literature about a topic by consulting several types of materials and databases, including those available at an academic library and on the Internet.***
- 3. Critically evaluate and select the literature for your review.***
- 4. Organize the literature you have selected by abstracting or taking notes on the literature and developing a visual diagram of it.***
- 5. Write a literature review that reports summaries of the literature for inclusion in your research report.***

[Reference: Creswell, J. W. \(2012\). \*Educational research: Planning, Conducting, and Evaluating Quantitative and Qualitative Research\* \(4th ed. ed.\). Boston: Pearson Education, Inc.](#)

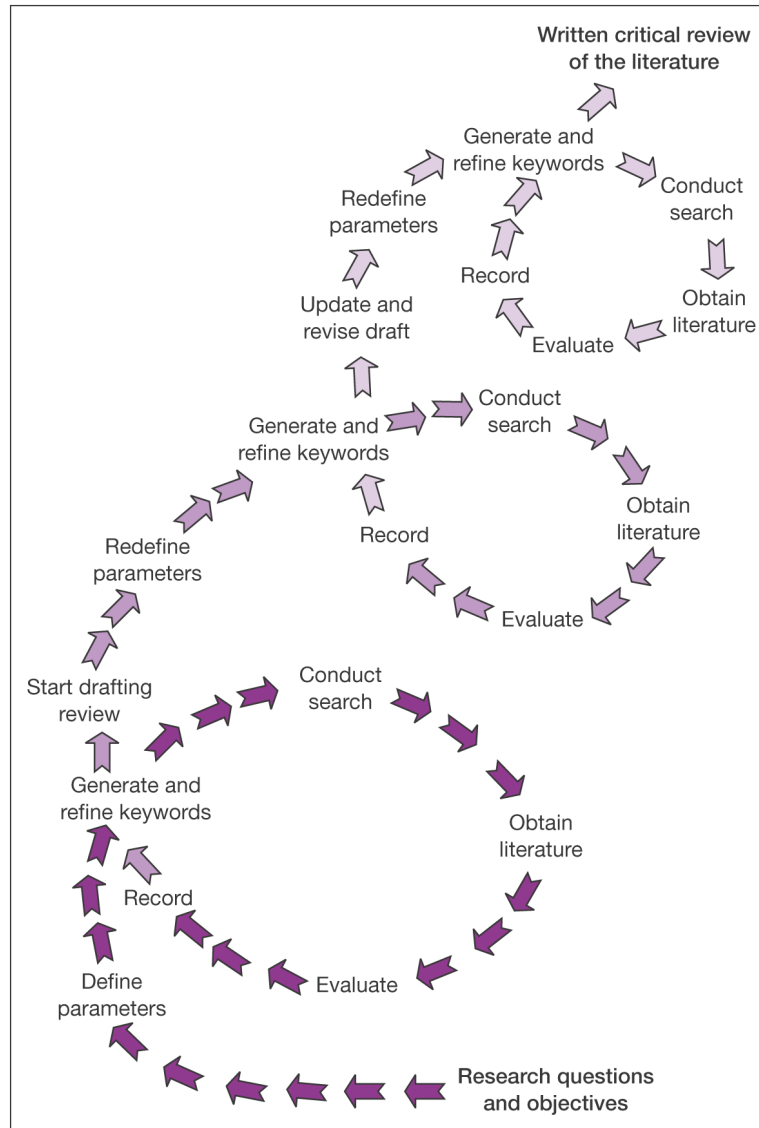

Developing a search strategy,  
Finding keyword

# The Research Process

# Effective searching

- » Developing a search strategy
- » Searching the library catalogue
- » Finding journal articles and papers
- » Searching the Internet
- » Other sources

Source: <http://learnline.cdu.edu.au/myresearch/plan/searchstrategy.html>

# Developing a search strategy

- » Defining the topic
- » Considering the scope of your topic
- » Identifying the main or important aspects
-  » Compiling a list of keywords
- » Developing your search strategy
- It is important to develop a search strategy to, not only, find the information you need but to also clarify your topic.

# How to Find and Develop a Viable Research Topic?

**Step One: Identify a Topic.**

**Step Two: Test Your Topic.**

**Test the main concepts or keywords** in your topic **by looking them up** in the appropriate background sources or **by using them as search terms.**

If you are finding too much information and too many sources, narrow your topic by using the **and** operator

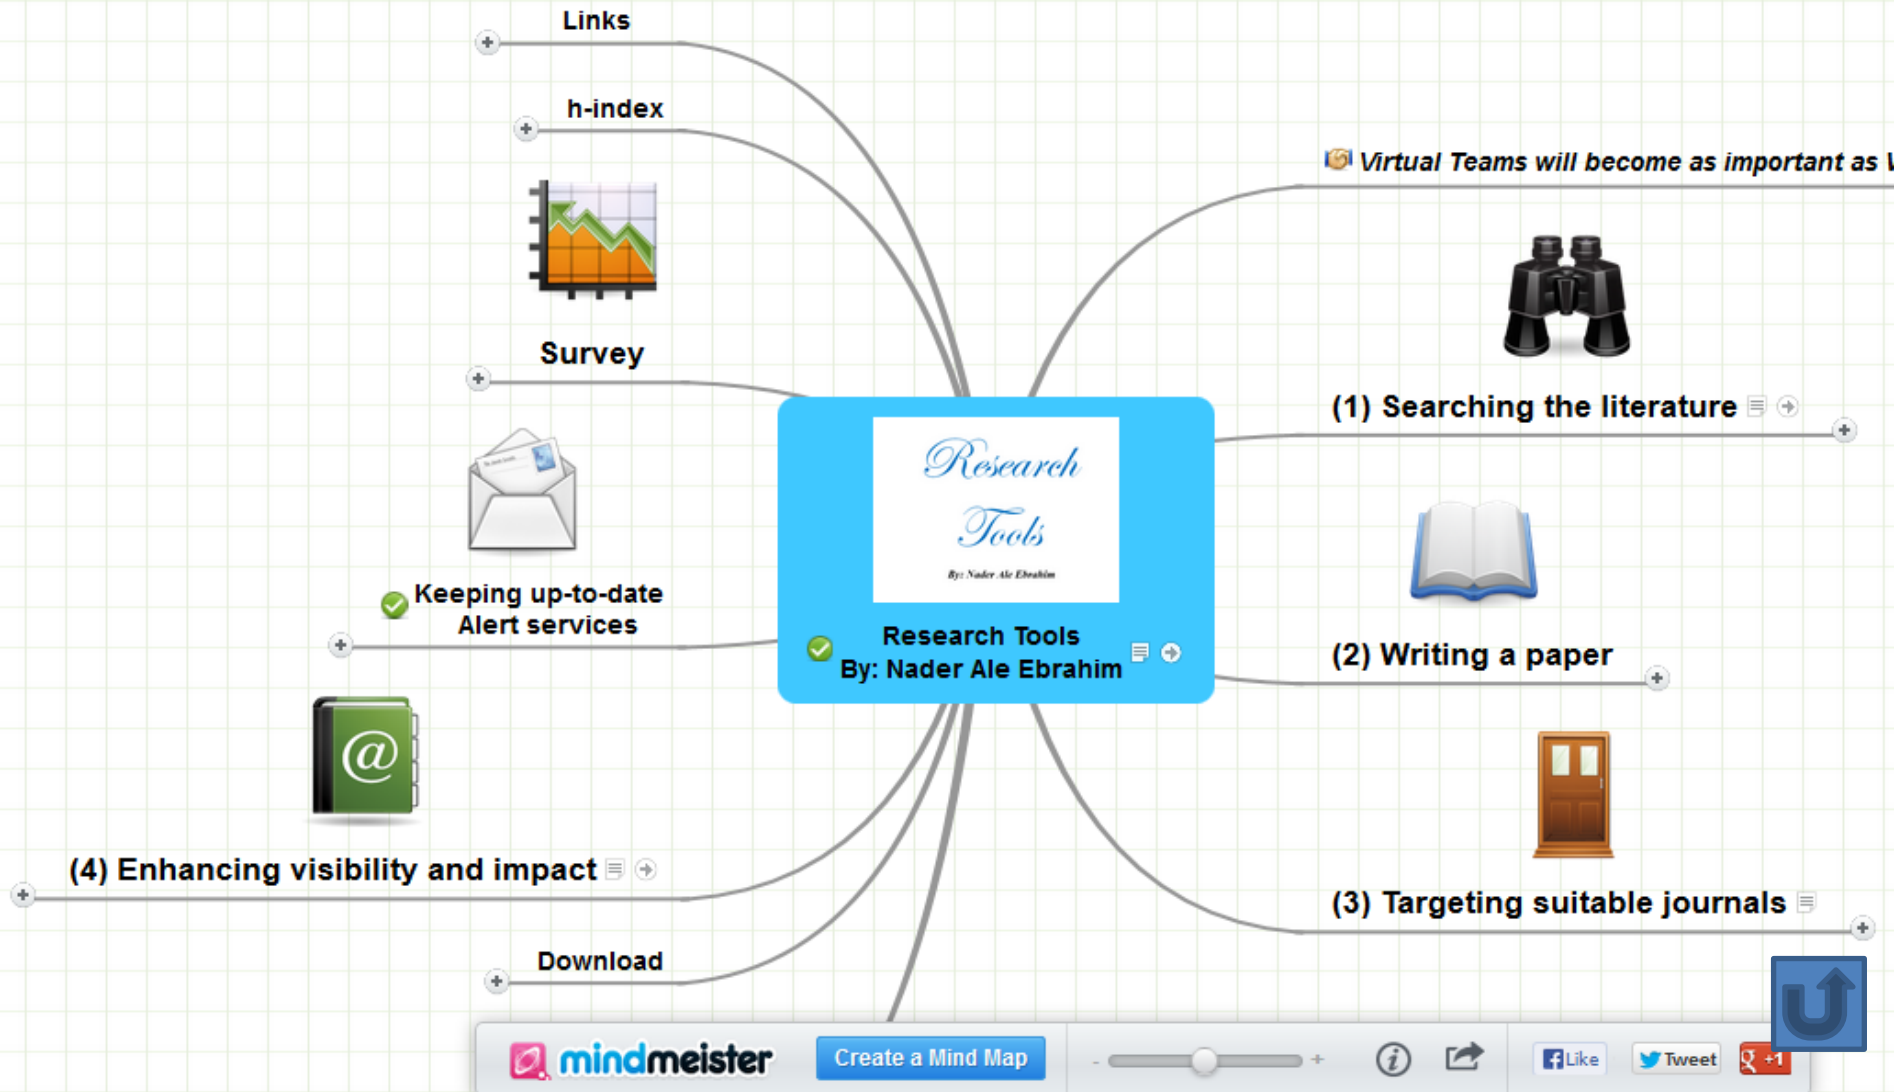

Finding too little information may indicate that you need to broaden your topic.

# Improving Readership of Your Articles

**Appearing at the top of the list of search results, and having a useful description of your work, greatly improve the likelihood that a reader will find and download your document.**

- Abstracts should include **keywords** that potential readers are likely to use in searches. It is especially valuable to modify and reuse words that appear in the document's title and full text to improve the article's rank when readers search for those words.
- The **first sentence of the abstract** is all that is likely to be displayed in the search page results, so make your first sentence one that will encourage readers to click the link.

# Research Tools Mind Map

# Narrow/ Broaden of searching

- Virtual AND (Team\* OR group OR “Virtual R&D Teams”) NOT (Management OR Manager)
- The toolset?
  1. “phrase searching”
  2. truncat\*
  3. OR, AND, NOT
  4. (brackets OR parentheses)
  5. Limit your search e.g. language, date range, type of publication etc.
  6. Think of alternative spellings

# Truncation

Symbol	Retrieves
*	Zero or more characters *carbon* <i>carbon, hydrocarbon, polycarbonate</i>
\$	Zero or one character colo\$r <i>color, colour</i>
?	One character only en?oblast <i>entoblast, endoblast</i>

# Key Words Selection

## Results: 26

*(from Web of Science Core Collection)*

### You searched for:

**TITLE:** ("Envelope Design")

**Timespan:** All years. **Indexes:** SCI-EXPANDED, SSCI, A&HCI, CPCI-S, CPCI-SSH.

## Results: 477

*(from Web of Science Core Collection)*

### You searched for:

**TITLE:** (("efficiency envelope\*") OR (envelope NEAR/5 building) OR (envelope NEAR/5 energy) OR ("envelope\* energy\* saving\*") OR ("Envelope\* System\*") OR ("thermal\* envelope\*") OR ("Envelope\* Design\*"))

**Timespan:** All years. **Indexes:** SCI-EXPANDED, SSCI, A&HCI, CPCI-S, CPCI-SSH.

# Keywords Plus

- KeyWords Plus<sup>®</sup> are index terms created by Thomson Reuters from significant, frequently occurring words in the titles of an article's cited references.

Source: [http://images.webofknowledge.com/WOK46/help/WOS/h\\_fullrec.html](http://images.webofknowledge.com/WOK46/help/WOS/h_fullrec.html)

# Keywords and Keywords Plus®

Authors sometimes provide a list of keywords or terms that they feel best represent the content of their paper. These keywords are contained in the ISI record (1991 data forward, depending on the [database](#)) for each article and are searchable. In addition, ISI generates KeyWords Plus for many articles. **KeyWords Plus** are words or phrases that frequently appear in the titles of an article's references, but do not necessarily appear in the title of the article itself. KeyWords Plus may be present for articles that have no author keywords, or may include important terms not listed among the title, abstract, or author keywords.

Source: <http://wos.isitrial.com/help/helpdefs.html>

# KeyWords Plus- Example

- New Product Development in Virtual Environment (ISI Indexed)
- Author Keywords: New product Development; Virtual teams; Concurrent Collaboration; Review paper
- KeyWords Plus: DEVELOPMENT TEAMS; PERFORMANCE; TECHNOLOGY; KNOWLEDGE; COMMUNICATION; PERSPECTIVE; INTEGRATION; INNOVATION; NETWORK; WORKING

Figure 1: Mean H-index Scores by Field of Study

[Source: Making Research Count: Analyzing Canadian Academic Publishing Cultures](#)

# Paper/journal quality

- Another guide to paper/journal quality is the general reputation of the association, society, or organization publishing the journal.
- Leading professional associations such as American Psychological Association (APA) or the Institute of Electrical and Electronics Engineers (IEEE) publish a range of journals that are highly regarded.

# What are journal impact factors?

Impact factors are a measure of the "quality" of a journal - they identify the most frequently cited journals in a field.

Impact factors can be used to:

identify journals in which to publish

identify journals relevant to your research

confirm the status of journals in which you have published

## **The Impact factor formula**

The impact factor of a journal is based on the average number of times that articles published in that journal in the two previous years (e.g. 2008 and 2009) were cited in the subsequent year (i.e. 2010). This is calculated using the following formula:

$$= \frac{\text{Cites in 2010 to items published in 2008 and 2009}}{\text{Number of items published in 2008 and 2009}}$$

If an impact factor is lower than 1.0 that means there were more articles published in the journal than there were cites to those articles in any given year.

Source: <http://guides.library.vu.edu.au/content.php?pid=251876&sid=2437240>

## Be aware that...

- Many journals do not have an impact factor (sources other than JCR need to be consulted).
- The impact factor cannot assess the quality of individual articles.
- Only research articles, technical notes and reviews are “citable” items. Editorials, letters, news items and meeting abstracts are “non-citable items”.

- Citations
-  Source paper – published in 2006
-  Cited reference – published in 2004 or 2005

$$\text{Impact Factor} = \frac{\text{Cites in 2006 to 2004 and 2005 papers}}{\text{Papers published in 2004 and 2005}}$$

The average number of citations in 2006 to scholarly material that was published in the prior two years

# INTERNATIONAL JOURNAL OF PRODUCTION RESEARCH

## Impact Factor in 2008

Cites in 2008 to items published in:	2007 =	144	Number of items published in:	2007 =	278
	2006 =	280		2006 =	270
	Sum:	424		Sum:	548

Calculation:  $\frac{\text{Cites to recent items}}{\text{Number of recent items}} = \frac{424}{548} = \mathbf{0.774}$

Keeping up-to-date (Alert system)

# Keeping up-to-date

Alert services are an effective means of keeping track of the latest research.

# What is an alert service?

- Many journal databases and book publishers offer free alert services. These are an effective means of keeping track of the latest research.
- Alert services come in different forms. The most common include:
  - a search alert. This is a saved search which alerts you when a book or article that matches your search terms is published.
  - a TOC (Table of Contents) alert. Such an alert notifies you when a new issue of a journal is published, and provides you with the issue's table of contents.
  - a citation alert. This advises you when a new article cites a particular work.
  - Most alert services are email-based. An increasing number are now offered as an RSS feed. If you are just beginning, you might like to try email alerts first. These are generally easier to create.

# Why subscribe to an alert service?

There is often a time delay between the point when a new article is published in a journal and it is indexed by one of the database services. Alert services will automatically keep you informed of new journal issues and articles on your topic or research interest when **new relevant material is made available**. Many of the large online research databases provide an automated alerting service.

Before using any current awareness services you should review the literature to establish a clear awareness of the topic that you would like to be kept up-to-date with on a regular basis. In this way you will increase the relevancy of the alerts you receive to your area of research. You can receive automated updates of newly published journal articles via email alert or via RSS Feed.

# Keeping up-to-date

## Create a Google Alert

- Enter the topic you wish to monitor.
- Search terms:

# **How to Read a Paper**

# THE THREE-PASS APPROACH

## 1-The first pass

The first pass is a quick scan to get a bird's-eye view of the paper. You can also decide whether you need to do any more passes. This pass should take about **five to ten minutes** and consists of the following steps:

1. Carefully read the title, abstract, and introduction
2. Read the section and sub-section headings, but ignore everything else
3. Read the conclusions
4. Glance over the references, mentally ticking off the ones you've already read.

[Source: Keshav, S. \(2007\). How to read a paper. ACM SIGCOMM Computer Communication Review, 37\(3\), 83-84.](#)

# THE THREE-PASS APPROACH

## 1- The second pass

In the second pass, read the paper with greater care, but ignore details such as proofs. It helps to jot down the key points, or to make comments in the margins, as you read. The second pass should **take up to an hour**. You should be able to summarize the main idea of the paper, with supporting evidence, to someone else.

1. Look carefully at the figures, diagrams and other illustrations in the paper. Pay special attention to graphs.
2. Remember to mark relevant unread references for further reading (this is a good way to learn more about the background of the paper).

# THE THREE-PASS APPROACH

## 1- The third pass

To fully understand a paper, particularly if you are reviewer, requires a third pass. The key to the third pass is to attempt to virtually re-implement the paper: that is, making the same assumptions as the authors, re-create the work. By comparing this re-creation with the actual paper, you can easily identify not only a paper's innovations, but also its hidden failings and assumptions.

This pass can take **about four or five hours** for beginners, and about an hour for an experienced reader.

[Source: Keshav, S. \(2007\). How to read a paper. ACM SIGCOMM Computer Communication Review, 37\(3\), 83-84.](#)

Indexing desktop search tool

# dtSearch Google Desktop Windows Search

The screenshot shows the dtSearch website with a navigation menu (Overview, Case Studies, Orders, Downloads, Support, And More) and several content sections. On the left, there are links for 'Search Site and Web Demo', 'Reviews', 'Case Studies', 'Features Map', 'Desktop Evaluations', and 'Developer Evaluations'. A quote states: "A powerful text mining engine... effective because of the level of intelligence it displays" - PC AI. Contact information for dtSearch is provided: 1-800-IT-FINDS (1-800-483-4637), 303-263-0731, fax 303-263-0781, info@dtsearch.com. The main content area is titled 'Instantly Search Terabytes of Text' and lists features such as searching terabytes of text across desktop, network, Internet or intranet sites; serving as tools for publishing; instant text searching; large document collections; and support for international languages. It also lists product line features like 25+ full-text and fielded data search options, support for various file formats (HTML, XSL/XML, PDF), and built-in Spider for static and dynamic content. A sidebar on the right shows product boxes for 'dtSearch Instantly Search Terabytes of Text', 'Desktop with Spider', 'Network with Spider', 'Publish (portable media)', 'Web with Spider', and 'Engine for Linux & .NET'. A note mentions '64-bit version' and 'cursor and click to select'. At the bottom, it says 'dtSearch Engine for Win & .NET - Add dtSearch search features and built-in format support to your application. API supports .NET, C++, Java, SQL, etc. .NET Spider API also available.' and 'The Smart Choice for Text Retrievals since 1991.'

The screenshot shows the Google Desktop website. The main heading is 'Google desktop' with a language selector and help link. Below it, the text says 'Info when you want it, right on your desktop'. A large blue button says 'Install Google Desktop' with the subtext 'Free and installs in seconds'. Below this, it lists features: 'Desktop search' (Search your computer as easily as you search the web with Google, Find and launch applications and files with just a few keystrokes) and 'Sidebar with gadgets' (Add Google Gadgets to customize your desktop, Get news, weather and more anywhere on your desktop). At the bottom, there are links for 'Features', 'Gadgets', 'Developers', 'Enterprise', and 'Blog'. The footer contains '©2009 Google - Terms of Service - Privacy Policy - Google Downloads'.

The screenshot shows the Microsoft website for Windows Search 4.0. The main heading is 'Windows Search 4.0' with the tagline 'Get the fastest and most reliable Windows search.' Below this, there are navigation tabs: 'Overview', 'Choose a technology', 'Technical resources', and 'Get it now'. The 'Overview' tab is selected. The main content area features a video player and a list of links: 'Watch the videos', 'Windows Search Administration Guide', and 'Find critical information faster'. A sidebar on the right has a 'Microsoft Forefront and EMPOWERING people' logo and a 'Download Free trial' button. The bottom of the page shows a navigation menu with 'Home', 'Explore Windows', 'Products', 'Shop', 'Downloads', and 'Help & How-to'. The footer contains 'Enterprise Search'.

The screenshot shows a Windows taskbar with several open applications: 'Google Desktop Do...', 'Presentation', 'Microsoft PowerPoint...', and 'Windows.jpg - Paint'. The system tray on the right shows the time as 11:46 PM.

stances and offers related research propositions. The paper also discusses the role of the Internet in new product performance. Finally, the paper concludes with managerial and research implications.

**1. New product development process and the role of the Internet**

Past research has consistently shown that a high-quality new product development process is one of the most critical success factors in new product development [8,10–12]. As a result, it has offered numerous processes that firms can use when developing their new products. Cooper [13] defines a new product development process as a formal blueprint, roadmap, template or thought process for driving a new product project from the idea to market launch and beyond. The process involves predetermined set of stages and each stage consists of a set of prescribed, cross-functional and parallel activities. Each stage is preceded by a gate, controlling the flow of the process and providing a decision checkpoint in the process. Because of the stages and the

with the first and second-generation processes, the third-generation process emphasizes efficiency and effectiveness in the new product development process through four fundamental areas. First, it is fluid, which means that there are overlaps in stages for greater speed. Second, it involves fuzzy gates, reducing the rigidity of criteria used in the gates and allowing conditional or situational considerations of the activities. Third, it is more focused in terms of prioritizing projects. Finally, it is flexible, suggesting that each new product is unique and has its own unique development process [13].

There are also compelling issues that indicate that new product development process may not be uniform across firms and products. Takeuchi and Nanoka [14] argue that today's rapidly changing and competitive market conditions require firms to adopt a flexible and fast new product development process and that a holistic "rugby" style new product development might be needed to respond to the conditions. With this approach, new product teams move through all phases of the development together, passing the ball back and forth as they develop new products. Based on a case study, the authors concluded that it is possible to

*Abstract*—In this paper, we present our more than two years research experiences on virtual R&D teams in small and medium-sized enterprises (SMEs) and draws conclusions, giving special attention to the structure of virtual teams required to support education-industry collaboration. We reports the relevant result of an online survey study. The online questionnaire was emailed by using the simple random sampling method to 947 manufacturing SMEs. The findings of this study show that SMEs in Malaysia and Iran are willing to use virtual teams for collaboration and the platform for industry-education collaboration is ready and distance between team members or differences in time zones, are not barriers to industry-education collaborations.

## Potential user factors driving adoption of IPTV: What are customers expecting from IPTV?

Dong Hee Shim\*  
Pennsylvania State University, University Park, PA 16802, USA  
Received 4 December 2005; received in revised form 1 May 2006; accepted 8 May 2006

**Abstract**

Internet Protocol Television (IPTV), the convergence services of television and Internet, is being rapidly developed around the world. The advent of digital technologies has changed the convergence market dramatically with the wide diffusion of the convergent services. Using the Technology Acceptance Model as a conceptual framework and method of logistic regression, this research analyzes the demand for IPTV by drawing data from 452 consumers. Individuals' responses to questions about whether they accept IPTV are collected and combined with observations of their socio-economic status, intrinsic/extrinsic factors modified from the Technology Acceptance Model. Results of logistic regression show two variables (intrinsic and extrinsic factors) that seem to explain what influences consumers' behavior towards adopting IPTV. Overall, the logistic regression model explains over 50% of the variance in IPTV adoption. The variances shed light on the multi-open platform environment that IPTV will forge.

## Electrochemical Study of Structural Effects in Complexation of Nano-baskets: Calix[4]-1,2-crown-3, -crown-4, -crown-5, -crown-6

Bahram Mokhtari and Kobra Pourabdollah

Razi Chemistry Research Center (RCRC), Shahreza Branch, Islamic Azad University, Shahreza-1, R-Iran

Eight nano-baskets of calix[4]arene-1,2-crown-3, -crown-4, -crown-5, -crown-6 were synthesized and their binding abilities towards alkali and alkaline earth metals as well as some lanthanides were studied using differential pulse voltammetry. The novelty of this study was investigation of those macrocyclic complexes by voltammetric behaviors of two acidic moieties in each scaffold during complexation of crown ether ring. The results revealed that by increasing the binding ability of macrocycle and cation, the anodic oxidation peak of carboxylic acids was decreased. Moreover, the

calix[4]crowns lag far behind. Combining crown ethers with calix[4]arenes increases the cation binding ability of the parent calixarenes and control of the selectivity is obtained through modulation of the crown ether size. Attachment of proton ionizable groups to calixcrowns can further improve their extraction properties because the ionized group not only participates in metal ion coordination, but also eliminates the need to transfer aqueous phase anions into the organic phase. Ungaro et al.<sup>[9]</sup> reported the first di-proton-ionizable calix[4]crown-5 in

**ABSTRACT.** Gastric cancer remains the third most common cancer in the world. Metastatic disease is a major cause of death in about half of the patients; therefore, early diagnosis is crucial for successful outcome. This study applied a sensitive method for the detection of circulating tumor cells using specific tumor markers for early detection. A total of 80 blood samples from 40 patients and 40 age-matched healthy controls were collected for the study. Circulating mRNA levels of two tumor markers, tumor endothelial marker 8 (TEM-8) and carcinoembryonic antigen (CEA) were evaluated using absolute quantitative real-time PCR assay in the Stratagene Mx-3000P real-time PCR system. GAPDH was used to normalize the data. TEM-8 and CEA were detected in patients' blood more than in controls, 22/40 vs 9/40,  $P = 0.005$ , and 30/40 vs 11/40,  $P = 0.008$ , respectively. The mRNA level of these markers in patients was significantly higher in comparison to normal controls ( $P = 0.018$ ,  $0.01$ ). This panel showed an overall sensitivity of 64% and specificity of 73%. Statistical analysis for demographic variants did not show any significant differences. Both markers were detected more frequently and in significantly higher levels in blood samples of patients

### Abstract

# Penalty for Plagiarism

Outside of academia the problem of plagiarism continues to generate headlines and scandals for politicians. In Germany, two prominent cabinet members have been forced to step down due to allegations of plagiarism in their doctoral dissertations. Meanwhile, in Canada, the head of the nation's largest school district was forced to resign in the face of plagiarism allegations, and plagiarism scandals have also embroiled a senator in the Philippines, the prime minister of Romania, and several members of the Russian Duma.

## **Computational study of environmental fate of ionic liquids using conductor-like screening model for real solvents (COSMO-RS) method**

**Zakari, A. Y., Waziri, S. M., Aderemi, B. O. and Mustapha, S. I.\***

Department of Chemical Engineering, Ahmadu Bello University Zaria, Nigeria.

The COSMO-RS method is an advanced method for the quantitative calculation of solvation mixture thermodynamics based on quantum chemistry. It was developed by Andreas Klamt and is distributed as the software COSMOtherm by his company COSMOlogic (as well as in the form of several remakes by others).

Some Nigerian researchers have used the software (without a license) and report a tremendously and completely unbelievably good correlation ( $r^2=0.992$ ) between the predicted results and experimental data for the logKow (octanol water partition coefficient) of ionic liquids.

# How do I avoid plagiarism?

- only hand in your own and original work.
- indicate precisely and accurately when you have used information provided by someone else, i.e. referencing must be done in accordance with a recognised system.
- indicate whether you have downloaded information from the Internet.
- never use someone else's electronic storage media, artwork, pictures or graphics as if it were your own.
- never copy directly without crediting the source
- do not translate without crediting the source
- do not paraphrase someone else's work without crediting the source
- do not piece together sections of the work of others into a new whole
- do not resubmit your own or other's previously graded work
- do not commit collusion (unauthorised collaboration, presenting work as one's own independent work, when it has been produced in whole or in part in collusion with other people)
- ghost-writing – you should not make use of ghost writers or professional agencies in the production of your work or submit material which has been written on your behalf

# 10 Major source of plagiarism

1. **Replication:** Submitting a paper to multiple publications in an attempt to get it published more than once
2. **Duplication:** Re-using work from one's own previous studies and papers without attribution
3. **Secondary Source:** Using a secondary source, but only citing the primary sources contained within the secondary one
4. **Misleading Attribution:** Removing an author's name, despite significant contributions; an inaccurate or insufficient list of authors who contributed to a manuscript
5. **Invalid Source:** Referencing either an incorrect or nonexistent source
6. **Paraphrasing:** Taking the words of another and using them alongside original text without attribution
7. **Repetitive Research:** Repeating data or text from a similar study with a similar methodology in a new study without proper attribution
8. **Unethical Collaboration:** Accidentally or intentionally use each other's written work without proper attribution; when people who are working together violate a code of conduct
9. **Verbatim:** copying of another's words and works without providing proper attribution, indentation or quotation marks
10. **Complete:** Taking a manuscript from another researcher and resubmitting it under one's own name

## Submit Paper: by File Upload (Step 1 of 3)

Choose a paper item submission method:

Single file upload

First name \*

Nader

Last name \*

Aleebrahim

Submission title \*

First Draft

The paper you are submitting will not be added to any paper repository.

Requirements for single file upload:

- File must be less than 20 MB
- The maximum paper length is 400 pages.
- File types allowed: MS Word, WordPerfect, PostScript, PDF, HTML, RTF, OpenOffice (ODT), Hangul (HWP) and plain text.

If your file exceeds 20 MB, read suggestions to meet requirements.

Browse for the file to upload \*

Organize the references  
(Reference management) tool

# *EndNote*

- *EndNote* is an almost indispensable tool for the serious researcher. And best of all, it's free to all UM postgraduates!

# Why use *EndNote*?

- *EndNote* allows you to create your own reference library. This library can be used to store the bibliographical details relating to the articles and books that you use. When it comes time to write your thesis, you can employ the library to insert references into your text and produce your bibliography. *EndNote* will save you hundreds of hours over the course of your research.

# With EndNote you can:

- **Access your research from anywhere.** Online or off. On your desktop, online, or iPad.
- Search **hundreds of online databases** to find the most cutting-edge research.
- **Save valuable time** finding full-text articles and reference updates, creating bibliographies, and organizing your references.
- **Store your research** and related files all in one place.
- Add **searchable keywords, notes and comments** to your PDFs.
- **Share your references** and research with colleagues.

Small and medium enterprises (SMEs) are the driving engine behind economic growth [1].

## References

- [1] N. Ale Ebrahim, S. Ahmed, and Z. Taha, "Virtual R & D teams in small and medium enterprises: A literature review," *Scientific Research and Essay*, vol. 4, pp. 1575–1590, December 2009.

# **Writing Literature Review**

# Writing your literature review

Writing your literature review takes time. You may need to complete several drafts before your final copy. It is important to have a good introduction that clearly tells the reader what the literature will be about.

An introduction must tell the reader the following:

- **what you are going to cover in the review**
- **the scope of your research**
- **how the review ties in with your own research topic.**

Source: [https://www.dlsweb.rmit.edu.au/lsu/content/2\\_AssessmentTasks/assess\\_tuts/lit\\_review\\_LL/writing.html](https://www.dlsweb.rmit.edu.au/lsu/content/2_AssessmentTasks/assess_tuts/lit_review_LL/writing.html)

# Introduction

This is a good example of an introduction because it has a topic sentence which indicates what will be covered and also tells the reader the specific focus of the literature review in the concluding sentence.

*Topic sentence - identifies five major themes as the scope of this review*

Many theories have been proposed to explain what motivates human behaviour. **Although the literature covers a wide variety of such theories, this review will focus on five major themes which emerge repeatedly throughout the literature reviewed.** These themes are: incorporation of the **self-concept** into traditional theories of motivation, the influence of **rewards** on motivation, the increasing importance of **internal forces** of motivation, **autonomy and self-control** as sources of motivation, and **narcissism** as an essential component of motivation. **Although the literature presents these themes in a variety of contexts, this paper will primarily focus on their application to self-motivation.**

*5 major themes to be covered*

*Concluding sentence - specific focus*

# Paragraphs

A paragraph is a group of connected sentences that develop a single point, argument or idea. Paragraphs need to link to other paragraphs so that the themes, arguments or ideas developed are part of a coherent whole rather than separate bits.

A paragraph should include:

- **a main statement / idea that you are putting forward, ie topic sentence**
- **evidence from research to support / argue your idea, showing where the writers agree and / or disagree**
- **student analysis of the research literature where appropriate**
- **summing up and linking to the next idea (paragraph).**

In the literature review, you will need to show evidence of integrating your readings into each paragraph and analysis of the readings where necessary.

Source: [https://www.dlswweb.rmit.edu.au/lsu/content/2\\_AssessmentTasks/assess\\_tuts/lit\\_review\\_LL/writing.html](https://www.dlswweb.rmit.edu.au/lsu/content/2_AssessmentTasks/assess_tuts/lit_review_LL/writing.html)

# Integrating arguments in paragraphs

## Integration of multiple sources

To develop an integrated argument from multiple sources, you need to link your arguments together. The model below is a guide.

*Topic sentence - outlining your main claim or key point for that paragraph*

*Most early theories of motivation were concerned with need satisfaction.* Robbins, Millett, Cacioppe and Waters-Marsh (1998) argued that motivation relies on what a person needs and wants. Similarly the early theories of Maslow and McGregor (Robbins et al. 1998) focused on personal needs satisfaction as the basis for motivational behaviour. However, recent studies outlined by Leonard, Beauvais, and Scholl (1999) suggest that personality and disposition play an equally important role in motivation. Current thinking does not discount these theories, but simply builds on them to include a self-concept.

*Supporting evidence from the readings*

*Contrasting theories from research*

*Concluding sentence - linking to the next paragraph*

# Integrating arguments in paragraphs

## Integration of student analysis

It is important to integrate your analysis and interpretation of the literature in your literature review. Read the following paragraph and see how the arguments have been integrated into the paragraph along with student analysis. Analysis is not just student opinion, it needs to be supported by the literature.

*Topic sentence - outlining your main claim or key point for that paragraph*

*First statement of evidence from the literature*

By its very nature, motivation requires a degree of individual satisfaction or narcissism. Robbins, Millet, Cacioppe, and Waters-Marsh (1998) suggest that motivation has as its very basis the need to focus on, and please the self. This is supported by Shaw, Shapard and Waugaman (2000) who contend that this narcissistic drive is based on the human effort to find personal significance in life. It can be argued that the desire to improve one's status is a highly motivational force, and is central to the idea of narcissistic motivation. The narcissistic motivational strategies put forward by Shaw et al. (2000) are concerned with motivation for life in general, but may also have applications in the context of work. These strategies, with their focus on personal needs, demonstrate that narcissism is an essential component of motivation.

*Second statement of evidence from the literature*

*Student analysis*

*Concluding statement*

Literature review ©2015-2016 Nader Ale Ebrahim

# Verbs for referencing

To incorporate quotations / references into a literature review, you can use a variety of verbs. These verbs are often used with prepositions, eg that, by, on. It is poor writing to use the same ones all the time, eg says that, states that. Verbs also allow the writer to indicate the degree to which they support the author of the research, eg claims that versus argues that. The following verbs (and prepositions) can be used to introduce references into your literature review. Please note that they can be used in different tenses.

Suggest (that)	Recent studies outlined by Leonard et al (1999) suggest that personality and disposition play an equally important role in motivation.
Argue (that)	Leonard et al (1999) argue that there are three elements of self perception.
Contend(s)	Mullens (1994) contends that motivation to work well is usually related to job satisfaction.
Outline	Recent studies outlined by Mullins (1994) suggest that personality and disposition play an equally important role in motivation.
Focus on	The early theories of Maslow and McGregor (Robbins et al, 1998) focused on personal needs and wants as the basis for motivation.
Define(s)	Eunson (1987, p. 67) defines motivation as 'what is important to you'.
Conclude(s) (that)	Reviewing the results of the case study, Taylor (1980) concludes that the theories of job enrichment and employee motivation do work.
State	He further states that there is an increasing importance on the role of autonomy and self regulation of tasks in increasing motivation.
Maintains (that)	Mullins (1994) maintains that job enrichment came from Herzber's two factor theory.
Found (that)	Mullins (1994) found that there is an increasing importance on the role of autonomy and self regulation of tasks in improving motivation.
Promote(s)	This promotes the idea that tension and stress are important external sources of motivation, which can be eliminated by completing certain tasks.
Establish(ed) (by)	As established by Csikszentmihalyi (Yair 2000, p. 2) 'the more students feel in command of their learning, the more they fulfil their learning potential'.
Asserts (that)	Locke's Goal Setting Theory asserts that setting specific goals tends to encourage work motivation (Robbins et al, 1998).
Show(s)	Various theories of motivation show employers that there are many factors that influence employees work performance.
Claim(s) (that)	Hackman and Oldham (1975) claim that people with enriched jobs, and high scores on the Job Diagnostic Survey, experienced more satisfaction and motivation.
Report(s)	Mullins (1994) reports on four content theories of motivation.
Mention(s)	Mullins (1994) mentions two common general criticisms of Herzberg's theory.
Address	Redesigning jobs so that responsibility moved from supervisors to the workers, was an attempt to address the issues of job satisfaction (Mullins, 1994).
