# Critically Analyzing Information Sources

## **1- Initial Appraisal:**

Author

Date of Publication

Edition or Revision

Publisher

Title of Journal (Distinguishing Scholarly Journals from other Periodicals)

## **2- Content Analysis:**

Intended Audience

Objective Reasoning

Coverage

Writing Style

Evaluative Reviews

# *h*-index ([Jorge E. Hirsch](#))

- *A scientist has index  $h$  if  $h$  of [his/her]  $N_p$  papers have at least  $h$  citations each, and the other  $(N_p - h)$  papers have at most  $h$  citations each.*

H-index from a plot of decreasing citations for numbered papers

**A scientist has index h if h of his/her  $N_p$  papers have at least h citations each, and the other  $(N_p-h)$  papers have no more than h citations each.**

As an example, a researcher with an H-index of 15 has (of their total number of publications) 15 papers which have been cited at least 15 times each.

Researcher A		Researcher B	
Paper rank	Citations	Paper rank	Citations
1	10	1	1348
2	8	2	159
3	6	3	50
4	5	4	4
5	4	5	4
6	0	6	3

Neither researcher can have an H-index of more than 6.

# Publish or Perish

**Publish or Perish** is a free program that retrieves citations from Google Scholar and allows users to calculate:

- Total number of papers
- Total number of citations
- Average number of citations per paper
- Average number of citations per author
- Average number of papers per author
- Average number of citations per year
- Hirsch's h-index and related parameters
- The contemporary h-index
- The age-weighted citation rate
- Two variations of individual h-indices
- An analysis of the number of authors per paper

Source: <http://guides.library.vu.edu.au/content.php?pid=251876&sid=2079929>

# Web of Science

- Web of Science® is perhaps the most well-known tool for determining the number of times a publication has been cited.
- Web of Science® is made up of three citation indexes owned by Thomson Scientific:
  - Science Citation Index ®
  - Social Sciences Citation Index ®
  - Arts & Humanities Citation Index ®.

Source: <http://guides.library.vu.edu.au/content.php?pid=251876&sid=2079929>

## How to do an Effective Literature Search?

Application Training Module Series I  
by Customer Education Team

[ts.training.asia@thomson.com](mailto:ts.training.asia@thomson.com)

**STOP SEARCHING, START DISCOVERING**

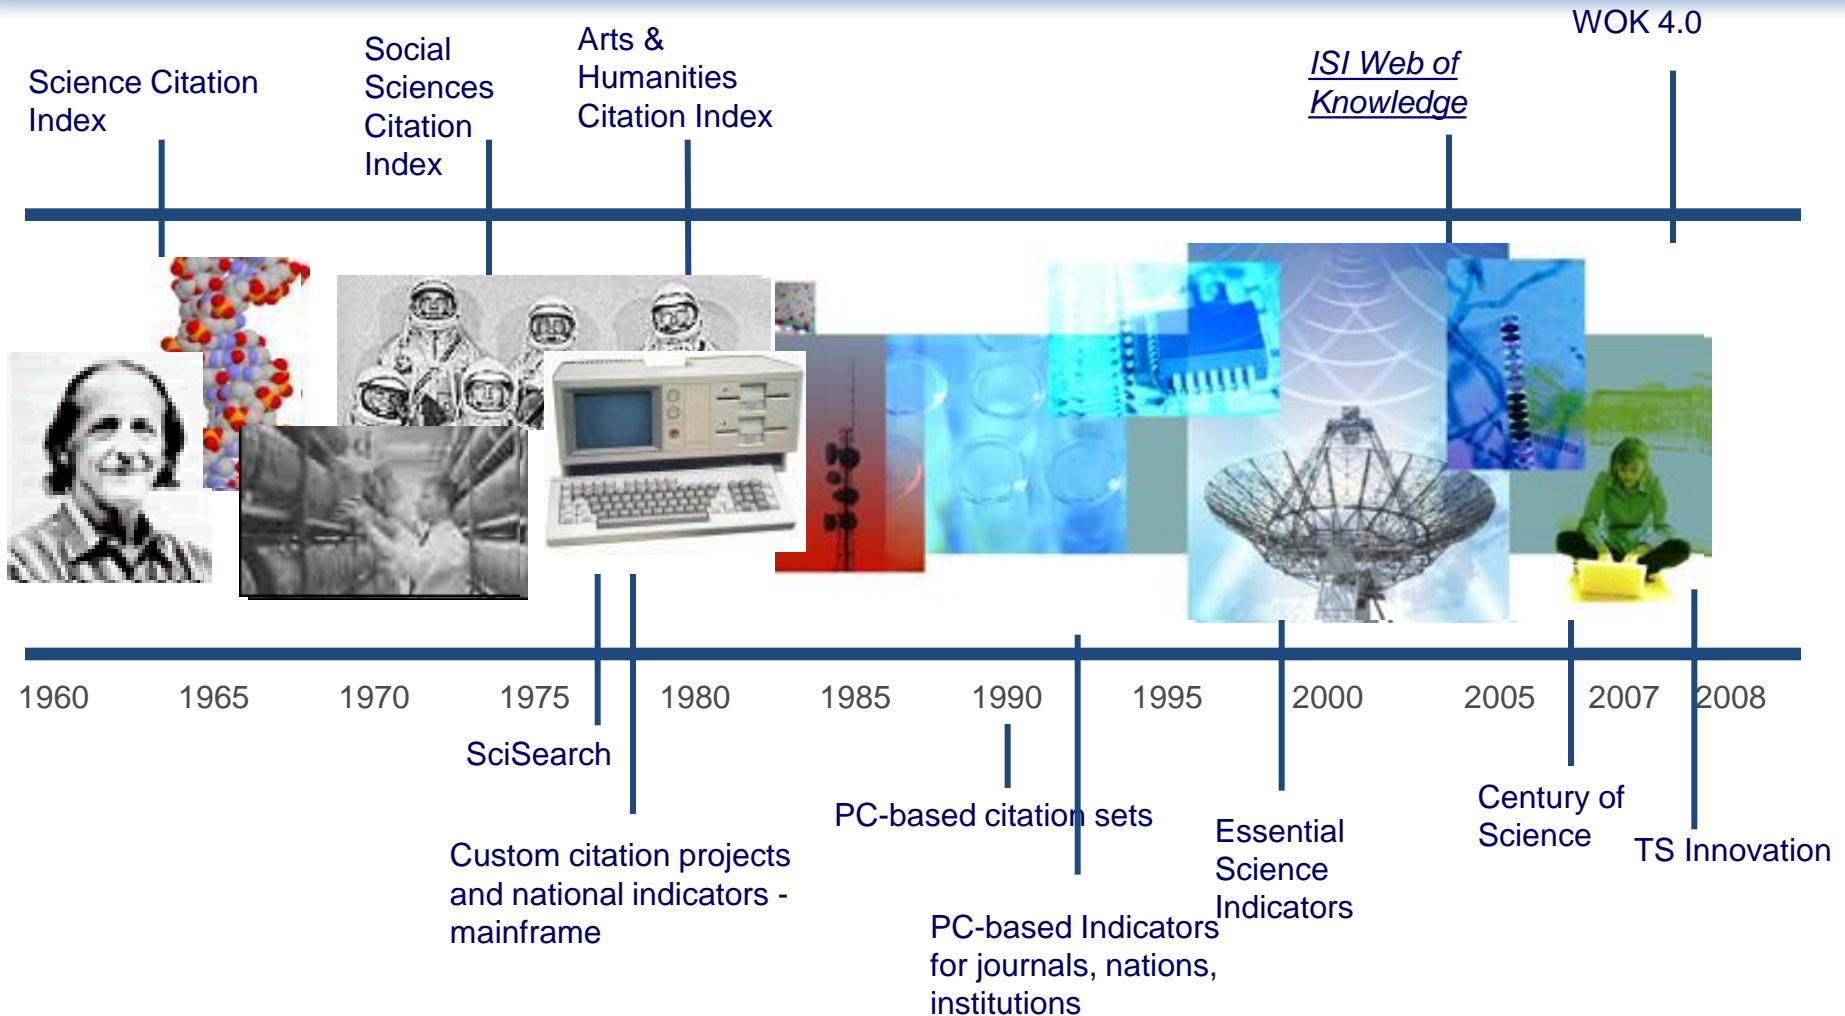

THOMSON REUTERS

# The Institute for Scientific Information (ISI)

- The **Institute for Scientific Information** (ISI) was founded by [Eugene Garfield](#) in 1960. It was acquired by [Thomson Scientific & Healthcare](#) in 1992, became known as **Thomson ISI** and now is part of the Healthcare & Science business of the multi-billion dollar [Thomson Reuters Corporation](#).
- ISI offered [bibliographic database](#) services. Its speciality: [citation indexing](#) and analysis, a field pioneered by Garfield. It maintains citation databases covering thousands of [academic journals](#), including a continuation of its long time print-based indexing service the [Science Citation Index](#) (SCI), as well as the [Social Sciences Citation Index](#) (SSCI), and the [Arts and Humanities Citation Index](#) (AHCI). All of these are available via ISI's [Web of Knowledge](#) database service.

# Thomson Reuters (formerly ISI) has been the authority on citation data for over 50 years.

# Eugene Garfield, Ph.D.

Founder & Chairman Emeritus  
Institute for Scientific Information (ISI)

[For more Info](#)

# The Institute for Scientific Information (ISI)

- The ISI also publishes annual [Journal Citation Reports](#) which list an [impact factor](#) for each of the journals that it tracks. Within the scientific community, journal impact factors play a large but controversial role in determining the kudos attached to a scientist's published research record.

**A FAST AND EFFICIENT  
SEARCH FOR A BETTER  
DISCOVERY EXPERIENCE**

Thomson Reuters (formerly ISI)  
*Web of Knowledge* is today's  
premier research platform for  
information in the sciences,  
social sciences, arts, and  
humanities.

# Impact Factor

- The most commonly used measure of journal quality is Impact Factor. This is a number which attempts to measure the impact of a journal in terms of its influence on the academic community. Impact Factors are published by Thomson-ISI

# Impact Factor and other bibliometric parameters

# Impact Factor-Journal Ranking

- Relative impact factors are often a better guide to the importance of a journal than raw numbers. *JCR* allows you to compare the impact factors of different journals in the same subject area
- The *Economic History Review* has an impact factor of 1.051. At first glance, it would appear that this journal is relatively unimportant. In fact, it is arguably the premier English-language journal in its field (its major competitor, the *Journal of Economic History Review*, has an even lower impact factor: a mere 0.529!). Far more illuminating is the journal's relatively high impact factor compared to other journals in the history of the social sciences. *Economic History Review* ranks first out of 15 journals in the Thomson-ISI's list of journals in this sub-discipline.

# Influences on Impact Factors: Subject Area

# What are journal impact factors?

Impact factors are a measure of the "quality" of a journal - they identify the most frequently cited journals in a field.

Impact factors can be used to:

identify journals in which to publish

identify journals relevant to your research

confirm the status of journals in which you have published

## **The Impact factor formula**

The impact factor of a journal is based on the average number of times that articles published in that journal in the two previous years (e.g. 2008 and 2009) were cited in the subsequent year (i.e. 2010). This is calculated using the following formula:

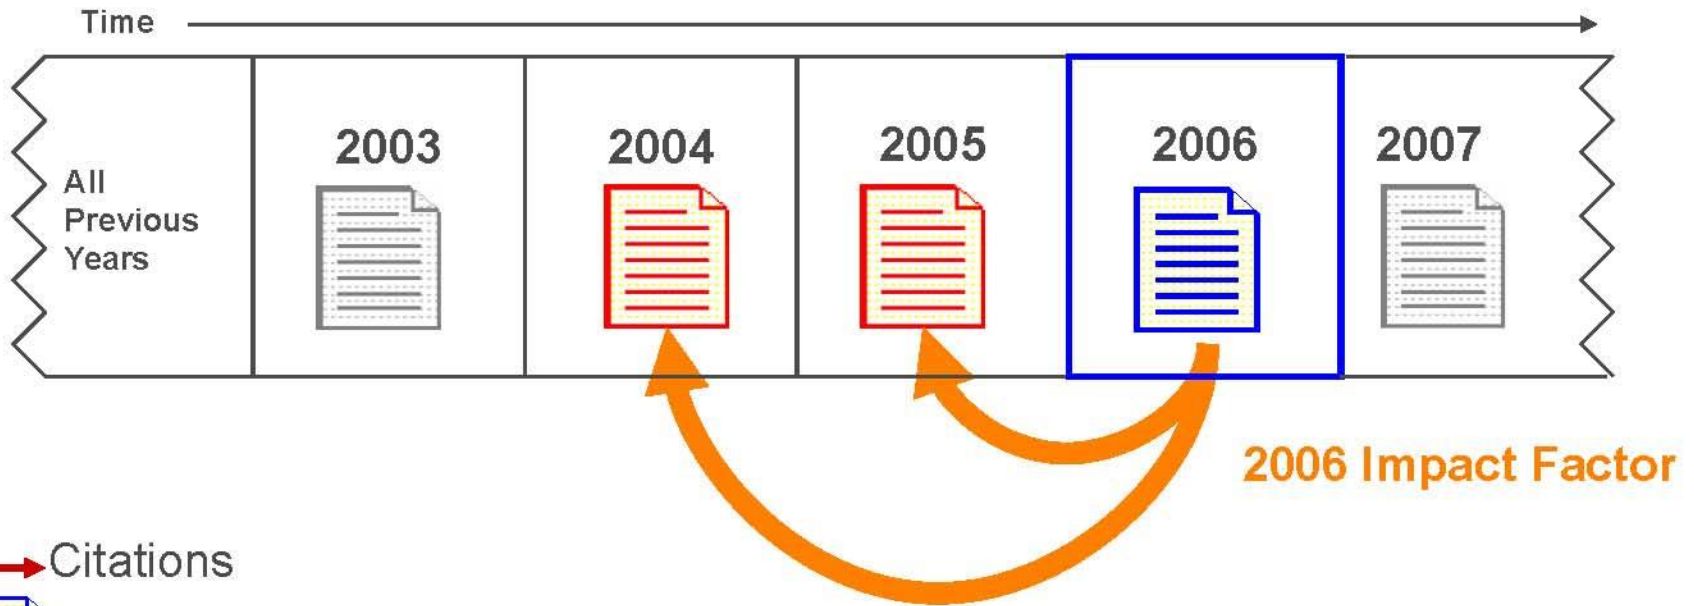

$$= \frac{\text{Cites in 2010 to items published in 2008 and 2009}}{\text{Number of items published in 2008 and 2009}}$$

If an impact factor is lower than 1.0 that means there were more articles published in the journal than there were cites to those articles in any given year.

Source: <http://guides.library.vu.edu.au/content.php?pid=251876&sid=2437240>

## Be aware that...

- Many journals do not have an impact factor (sources other than JCR need to be consulted).
- The impact factor cannot assess the quality of individual articles.
- Only research articles, technical notes and reviews are “citable” items. Editorials, letters, news items and meeting abstracts are “non-citable items”.

- Citations
-  Source paper – published in 2006
-  Cited reference – published in 2004 or 2005

$$\text{Impact Factor} = \frac{\text{Cites in 2006 to 2004 and 2005 papers}}{\text{Papers published in 2004 and 2005}}$$

The average number of citations in 2006 to scholarly material that was published in the prior two years

# INTERNATIONAL JOURNAL OF PRODUCTION RESEARCH

## Impact Factor in 2008

Cites in 2008 to items published in:	2007 =	144	Number of items published in:	2007 =	278
	2006 =	280		2006 =	270
	Sum:	424		Sum:	548

Calculation:  $\frac{\text{Cites to recent items}}{\text{Number of recent items}} = \frac{424}{548} = \mathbf{0.774}$

Journal Impact Factor

Cites in 2008 to items published in: 2007 = 144    Number of items published in: 2007 = 278  
 2006 = 280    2006 = 270  
 Sum: 424    Sum: 548  
 Calculation:  $\frac{\text{Cites to recent items}}{\text{Number of recent items}} = \frac{424}{548} = 0.774$

**Impact Factor Trend Graph: INTERNATIONAL JOURNAL OF PRODUCTION RESEARCH**  
 Click on the "Return to Journal" button to view the full journal information.

*\*Impact Factor -- see below for calculations*

The journal impact factor is a measure of the frequency with which the "average article" in a journal has been cited in a particular year. The impact factor will help you evaluate a journal's relative importance, especially when you compare it to others in the same field. For more bibliometric data and information on this and other journal titles click on the "Return to Journal" button.

NOTE: Title changes and coverage changes may result in no impact factor for one or more years in the above graph.

**2008 Impact Factor**

Cites in 2008 to articles published in: 2007 = 144    Number of articles published in: 2007 = 278  
 2006 = 280    2006 = 270  
 Sum: 424    Sum: 548  
 Calculation:  $\frac{\text{Cites to recent articles}}{\text{Number of recent articles}} = \frac{424}{548} = 0.774$

**2007 Impact Factor**

Cites in 2007 to articles published in: 2006 = 88    Number of articles published in: 2006 = 270  
 2005 = 204    2005 = 251  
 Sum: 292    Sum: 521  
 Calculation:  $\frac{\text{Cites to recent articles}}{\text{Number of recent articles}} = \frac{292}{521} = 0.560$

Journal Ranking ⓘ

For 2008, the journal INTERNATIONAL JOURNAL OF PRODUCTION RESEARCH has an Impact Factor of 0.774.

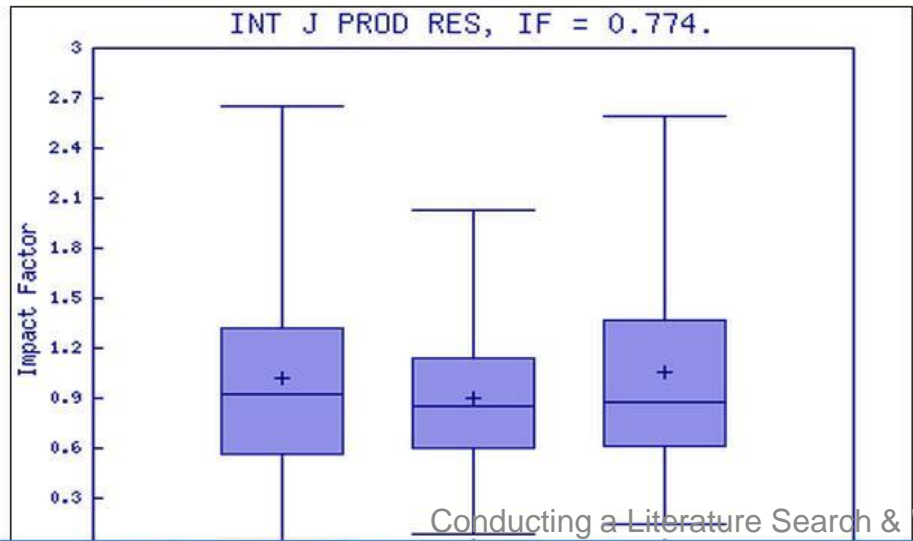

This table shows the ranking of this journal in its subject categories based on Impact Factor.

Category Name	Total Journals in Category	Journal Rank in Category	Quartile in Category
ENGINEERING, INDUSTRIAL	33	21	Q3
ENGINEERING, MANUFACTURING	38	21	Q3
OPERATIONS RESEARCH & MANAGEMENT SCIENCE	64	40	Q3

Category Box Plot ⓘ

For 2008, the journal INTERNATIONAL JOURNAL OF PRODUCTION RESEARCH has an Impact Factor of 0.774.

This is a box plot of the subject category or categories to which the journal has been assigned. It provides information about the distribution of journals based on Impact Factor values. It shows median, 25th and 75th percentiles, and the extreme values of the distribution.

**Keeping up-to-date (Alert system)**

# Keeping up-to-date

Alert services are an effective means of keeping track of the latest research.

# What is an alert service?

- Many journal databases and book publishers offer free alert services. These are an effective means of keeping track of the latest research.
- Alert services come in different forms. The most common include:
  - a search alert. This is a saved search which alerts you when a book or article that matches your search terms is published.
  - a TOC (Table of Contents) alert. Such an alert notifies you when a new issue of a journal is published, and provides you with the issue's table of contents.
  - a citation alert. This advises you when a new article cites a particular work.
  - Most alert services are email-based. An increasing number are now offered as an RSS feed. If you are just beginning, you might like to try email alerts first. These are generally easier to create.

# Why subscribe to an alert service?

There is often a time delay between the point when a new article is published in a journal and it is indexed by one of the database services. Alert services will automatically keep you informed of new journal issues and articles on your topic or research interest when **new relevant material is made available**. Many of the large online research databases provide an automated alerting service.

Before using any current awareness services you should review the literature to establish a clear awareness of the topic that you would like to be kept up-to-date with on a regular basis. In this way you will increase the relevancy of the alerts you receive to your area of research. You can receive automated updates of newly published journal articles via email alert or via RSS Feed.

# **How to Read a Paper**

# THE THREE-PASS APPROACH

## 1-The first pass

The first pass is a quick scan to get a bird's-eye view of the paper. You can also decide whether you need to do any more passes. This pass should take about **five to ten minutes** and consists of the following steps:

1. Carefully read the title, abstract, and introduction
2. Read the section and sub-section headings, but ignore everything else
3. Read the conclusions
4. Glance over the references, mentally ticking off the ones you've already read.

[Source: Keshav, S. \(2007\). How to read a paper. ACM SIGCOMM Computer Communication Review, 37\(3\), 83-84.](#)

# THE THREE-PASS APPROACH

## 1- The second pass

In the second pass, read the paper with greater care, but ignore details such as proofs. It helps to jot down the key points, or to make comments in the margins, as you read. The second pass should **take up to an hour**. You should be able to summarize the main idea of the paper, with supporting evidence, to someone else.

1. Look carefully at the figures, diagrams and other illustrations in the paper. Pay special attention to graphs.
2. Remember to mark relevant unread references for further reading (this is a good way to learn more about the background of the paper).

[Source: Keshav, S. \(2007\). How to read a paper. ACM SIGCOMM Computer Communication Review, 37\(3\), 83-84.](#)

Conducting a Literature Search & Writing Review

Paper ©2014 Nader Ale Ebrahim

# THE THREE-PASS APPROACH

## 1- The third pass

To fully understand a paper, particularly if you are reviewer, requires a third pass. The key to the third pass is to attempt to virtually re-implement the paper: that is, making the same assumptions as the authors, re-create the work. By comparing this re-creation with the actual paper, you can easily identify not only a paper's innovations, but also its hidden failings and assumptions.

This pass can take **about four or five hours** for beginners, and about an hour for an experienced reader.

Indexing desktop search tool

# dtSearch Google Desktop Windows Search

The screenshot shows the dtSearch website with a navigation menu (Overview, Case Studies, Orders, Downloads, Support, And More) and a main content area. The main content area is divided into several sections: 'Search Site and Web Demo' with a search icon, 'Reviews Case Studies Features Map Desktop Evaluations Developer Evaluations', a quote: "A powerful text mining engine... effective because of the level of intelligence it displays" - PC AI, 'Contact dtSearch' with phone and fax numbers, and 'Instantly Search Terabytes of Text' with a list of features and a 'Product line features' section. The product line features include: 25+ full-text and fielded data search options, support for international languages, highlighting hits in popular web-based formats (HTML, XSL/XML, and PDF), proprietary file parsers/converters, and built-in Spider for static and dynamic content. A 'dtSearch Engine for Win & .NET' section is also visible.

The screenshot shows the Google Desktop website. The main heading is 'Google desktop' with a language selector and help link. Below the heading is the text 'Info when you want it, right on your desktop'. A large blue button says 'Install Google Desktop' with the subtext 'Free and installs in seconds'. Below this, it says 'You can choose from these features during installation:' followed by three bullet points: 'Desktop search' (Search your computer as easily as you search the web with Google), 'Sidebar with gadgets' (Add Google Gadgets to customize your desktop), and 'Get news, weather and more anywhere on your desktop'. At the bottom, there are links for 'Features', 'Gadgets', 'Developers', 'Enterprise', and 'Blog'.

The screenshot shows the Windows Search 4.0 website. The main heading is 'Windows Search 4.0' with the subtext 'Get the fastest and most reliable Windows search.' Below this is a navigation bar with 'Overview', 'Choose a technology', 'Technical resources', and 'Get it now'. The main content area is divided into several sections: 'Windows Search' with a list of links (Watch the videos, Windows Search Administration Guide, Find critical information faster), 'Microsoft Forefront and EMPOWERING people', and 'User Experience that Helps You Stay Productive'. The bottom of the page has a navigation bar with 'Home', 'Explore Windows', 'Products', 'Shop', 'Downloads', and 'Help & How-to'.

The screenshot shows a Windows taskbar with several open applications: 'Google Desktop Do...', 'Presentation', 'Microsoft PowerPoint...', 'Windows.jpg - Paint', and 'Internet Explorer'. The system tray on the right shows the time as 11:46 PM and the date as 4/11/2014.

stances and offers related research propositions. The paper also discusses the role of the Internet in new product performance. Finally, the paper concludes with managerial and research implications.

**1. New product development process and the role of the Internet**

Past research has consistently shown that a high-quality new product development process is one of the most critical success factors in new product development [8,10–12]. As a result, it has offered numerous processes that firms can use when developing their new products. Cooper [13] defines a new product development process as a formal blueprint, roadmap, template or thought process for driving a new product project from the idea to market launch and beyond. The process involves predetermined set of stages and each stage consists of a set of prescribed, cross-functional and parallel activities. Each stage is preceded by a gate, controlling the flow of the process and providing a decision checkpoint in the process. Because of the stages and the

with the first and second-generation processes, the third-generation process emphasizes efficiency and effectiveness in the new product development process through four fundamental areas. First, it is fluid, which means that there are overlaps in stages for greater speed. Second, it involves fuzzy gates, reducing the rigidity of criteria used in the gates and allowing conditional or situational considerations of the activities. Third, it is more focused in terms of prioritizing projects. Finally, it is flexible, suggesting that each new product is unique and has its own unique development process [13].

There are also compelling issues that indicate that new product development process may not be uniform across firms and products. Takeuchi and Nanoka [14] argue that today's rapidly changing and competitive market conditions require firms to adopt a flexible and fast new product development process and that a holistic "rugby" style new product development might be needed to respond to the conditions. With this approach, new product teams move through all phases of the development together, passing the ball back and forth as they develop new products. Based on a case study, the authors concluded that it is possible to
